ABSTRACT

wherein L¹, L², L³, R¹, R², R³, and R⁶ are as defined in the specification. Compounds of formula (I) are EP₂ agonists useful in the treatment of glaucoma, osteoporosis, bone fracture, periodontal bone loss, orthopedic implant, alopecia, neuropathic pain, and related disorders. Pharmaceutical compositions and methods of treating conditions or disorders are also described.

RELATED APPLICATIONS

FIELD OF THE INVENTION

The subject matter disclosed and claimed herein centers on novel EP<sub>4</sub> receptor-selective pyrrolidine-2-one (γ-lactam) derivatives and their uses as therapies for EP<sub>4</sub> receptor-mediated diseases and conditions.

BACKGROUND OF THE INVENTION

All references, including patents and patent applications, are hereby incorporated by reference in their entireties.

Arachidonic acid (abbreviated as AA herein) is a ubiquitous polyunsaturated fatty acid (PUFA) that is found esterified to phospholipids at the secondary alcohol of glycerol in all mammalian cellular membranes. Enzymatic hydrolysis of esterified AA by calcium (Ca<sup>++</sup>)-induced cytosolic phospholipase 2 (cPLA2) releases free AA, which may be further catalytically converted by the cyclooxygenase (COX) into the intermediate prostaglandin H2 followed by subsequent enzymatic isomerization into the naturally occurring prostaglandins (PGs) and thromboxanes. The five primary prostanooids include prostaglandin E<sub>2</sub> (PGE<sub>2</sub>), prostaglandin D<sub>2</sub> (PGD<sub>2</sub>), prostaglandin I<sub>2</sub> (PGI<sub>2</sub>), thromboxane A<sub>2</sub> (TXA<sub>2</sub>), and prostaglandin F<sub>2α</sub> (PGF<sub>2α</sub>). (John, U. et al., Angew. Chem. Int. Ed. 2008, 47, 5894-5955; Wymann, M. P. et al., Nat. Rev. Mol. Cell. Biol. 2008, 9, 162-176; Samuelsson, B. et al., Ann. Rev. Biochem. 1978, 47, 907-1029). These five prostaglandins are lipid mediators that interact with nine specific membrane receptors of a distinct prostanoid subfamily of G-protein-coupled receptors (GPCRs), designated EP<sub>1</sub>, EP<sub>2</sub>, EP<sub>3</sub>, EP<sub>4</sub>, respectively (Breyer, R. M. et al., Annu. Rev. Pharmacol. Toxicol. 2001, 41, 661-690). Prostaglandin and PG receptor pharmacology, signaling, and physiology have been studied and well documented (Hata, A. N. et al., Pharmacol. Ther. 2004, 103(2), 147-166; El Attar, T. M. A., J. Oral Pathol. Med. 1978, 7(5), 239-252; Poyser, N. L., Clinics in Endocrinology and Metabolism 1973, 2(3), 393-410). Prostaglandins are short-lived local signaling molecules that are not stored in cells or tissues but are produced as needed by specific cells of virtually all body tissues. Their target cells reside in the immediate vicinity of their secretion sites. Well-known PG functions include regulation of cell stimulation, growth, and differentiation, immune response and inflammation, allergy, asthma, pain, vasomotor action, neuromodulation, intraocular pressure, and platelet aggregation, as well as mediation of fever, managing of renal blood flow, and induction of labor (Negishi, M. et al., Prog. Lipid Res. 1993, 32(4), 417-434).

As is the case for most prostaglandins, the biosynthesis of PGE<sub>2</sub> commences with liberation of free AA from its esterified form in the cell membrane. One key enzyme involved in PGE<sub>2</sub> biosynthesis is prostaglandin H synthase (PGHS). PGHS possesses both a COX and a peroxidase function. The COX activity promotes conversion of free AA to the unstable endoperoxide prostaglandin G<sub>2</sub> (PGG<sub>2</sub>) via double oxygen insertion. One inserted oxygen molecule is subsequently reduced by the peroxidase activity of PGHS to provide the versatile biosynthetic cascade intermediate PGG<sub>1</sub>2. The glutathione-dependent enzyme prostaglandin E synthase (PGES) promotes isomerization of PGG<sub>1</sub>2 to PGE<sub>2</sub> via peroxide ring opening of PGG<sub>1</sub>2 to provide the highly functionalized hydroxypentanone scaffold of PGE<sub>2</sub>.

**SUMMARY OF THE INVENTION**

In one aspect, the present invention provides compounds of formula (I)

![Chemical structure](image)

or a pharmaceutically acceptable salt thereof, wherein:

L<sub>1</sub> is

a) C<sub>1</sub>-C<sub>9</sub>-alkylene, C<sub>1</sub>-C<sub>9</sub>-alkenylene, or C<sub>1</sub>-C<sub>9</sub>-alkynylene, wherein the C<sub>2</sub>-C<sub>9</sub>-alkylene, C<sub>2</sub>-C<sub>9</sub>-alkenylene, or C<sub>2</sub>-C<sub>9</sub>-alkynylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents;

b) -(CH<sub>t</sub>)<sub>t</sub>-G-(CH<sub>p</sub>)<sub>p</sub>--; wherein t is 0, 1, or 2, p is 0, 1, 2, or 3, and t+p=0, 1, 2, 3, or 4;

c) -(CH<sub>n</sub>)<sub>n</sub>-G<sup>1</sup>-(CH<sub>t</sub>)<sub>t</sub>--; -(CH<sub>n</sub>)<sub>n</sub>-G<sup>2</sup>-(CH<sub>t</sub>)<sub>t</sub>--; -(CH<sub>n</sub>)<sub>n</sub>-C<sup>3</sup>-G<sup>1</sup>--; or -(CH<sub>n</sub>)<sub>n</sub>-C<sup>3</sup>-G<sup>2</sup>--; wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6;

G is

![Chemical structure](image)

wherein G<sup>2</sup> is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C<sub>1</sub>-C<sub>9</sub>-alkyl, C<sub>1</sub>-C<sub>9</sub>-haloalkyl, cyano, halogen, C<sub>1</sub>-C<sub>9</sub>-alkoxy, and C<sub>1</sub>-C<sub>9</sub>-haloalkoxy;

R<sup>1</sup> is COOR, CONR<sup>9</sup>R<sup>10</sup>, CH<sub>2</sub>OR, SO<sub>2</sub>R, SO<sub>2</sub>NR<sup>8</sup>R<sup>10</sup>, PO(OAr)<sup>2</sup>, or tetrazol-5-yl;

R<sup>9</sup> is H, C<sub>1</sub>-C<sub>9</sub>-alkyl, or aryl;

R<sup>10</sup> is H, C<sub>1</sub>-C<sub>9</sub>-alkyl, COR<sup>11</sup>, OR<sup>9</sup>, or SO<sub>2</sub>R<sup>11</sup>;

R<sup>11</sup> is C<sub>1</sub>-C<sub>9</sub>-alkyl;

R<sup>12</sup>, at each occurrence, is independently H or C<sub>1</sub>-C<sub>9</sub>-alkyl;

L<sub>2</sub> is

![Chemical structure](image)

wherein R<sup>2</sup> and R<sup>3</sup> are each H, CH<sub>3</sub>, fluoro, or chloro;
R¹ and R² are each independently H or C₁-C₄ alkyl, wherein no more than one of R⁴ and R⁵ is H; or R⁴ and R⁵ together with the carbon to which they are attached form a C₃-C₄ cycloalkyl; 
L¹ is C₂-C₅ alkyne, or C₂-C₅ alkenylene; wherein the alkyne and alkenylene are optionally substituted with 1, 2, 3, or 4 fluoro substituents; 
R⁶ is aryl or heteroaryl wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₃-C₅ alkyln, C₃-C₅ haloalkyl, cyano, haloegen, C₁-C₅ alkoxy, C₁-C₅ haloalkoxy, and —C₁-C₅ alkyln-C₃-C₅ alkoxy; and 
r is 0 or 1. 

In another aspect, the present invention provides compounds of formula (Ia)

![Chemical Structure](image)

or a pharmaceutically acceptable salt thereof, wherein R¹, R², R³, R⁴, L¹, L², and L³ are as defined herein.

In another aspect of the invention are compounds of formula (II)

![Chemical Structure](image)

wherein R¹, R², R³, R⁴, L¹ and L² are as defined herein.

Another aspect of the present invention relates to pharmaceutical compositions comprising therapeutically effective amounts of a compound described herein or a pharmaceutically acceptable salt, solvate, salt of a solvate, or solvate of a salt thereof, in combination with a pharmaceutically acceptable carrier.

In another aspect, the invention provides compounds that bind to the EP₄ receptor with high affinity and agonist activity. In certain embodiments, compounds of the invention may possess selectivity for the EP₄ receptor over other EP receptors. In other certain embodiments, compounds of the invention may possess selectivity for the EP₄ receptor versus other EP receptors and other prostaglandin receptors.

In another aspect, the present invention provides a method of treating a disease or disorder related to the EP₄ receptor by administering to a patient a therapeutically effective amount of a compound or composition of formula (I), (Ia), or (II). Such diseases or disorders include those related to elevated intraocular pressure such as glaucoma. Other diseases or conditions treatable by the compounds and compositions of the invention include those associated with excessive bone loss, such as osteoporosis.

The present invention also provides methods of preparing compounds of formula (I), (Ia), or (II).

In another aspect, the invention provides intermediates useful in the preparation of EP₄ agonists. In still another aspect, the invention provides methods of preparing the intermediates.

Further provided herein are the use of the present compounds or pharmaceutically acceptable salts, solvates, salts of solvates, or solvates of salts thereof, in the manufacture of a medicament for the treatment of the diseases or conditions described herein, alone or in combination with one or more pharmaceutically acceptable carrier(s).

DETAILED DESCRIPTION

Definition of Terms

The term “agonist” as used herein refers to a compound, the biological effect of which is to mimic the action of the natural agonist PGE₂. An agonist may have full efficacy (i.e., equivalent to PGE₂), partial efficacy (lower maximal efficacy compared to PGE₂), or super maximal efficacy (higher maximal efficacy compared to PGE₂). An agonist with partial efficacy is referred to as a “partial agonist.” An agonist with super maximal efficacy is referred to as “super agonist.”

The term “alkyl” as used herein, means a straight or branched chain saturated hydrocarbon. Representative examples of alkyl include, but are not limited to, methyl, ethyl, n-propyl, isopropyl, n-butyl, sec-butyl, isobutyl, tert-butyl, n-pentyl, isopentyl, neopentyl, n-hexyl, 3-methylhexyl, 2,2-dimethylpentyl, 2,3-dimethylpentyl, n-heptyl, n-octyl, n-nonyl, and n-decyl.

The term “alkenyl” as used herein, means a straight or branched chain hydrocarbon containing at least one carbon-carbon double bond. Representative examples of alkkenyl include, but are not limited to, ethenyl, 2-propenyl, 2-methyl-2-propenyl, 3-butenyl, 4-pentenyl, 5-hexenyl, 2-heptenyl, 2-methyl-1-heptenyl, and 3-decenyl.

The term “alkynyl,” as used herein, means a straight or branched chain hydrocarbon containing at least one carbon-carbon triple bond. Representative examples include propargyl, butynyl, pentynyl, and the like.

The term “alkylene,” as used herein, means a divalent group derived from a straight or branched chain saturated hydrocarbon. Representative examples of alkenylene include, but are not limited to, —CH₂—, —CH₂CH₂—, —CH₂CH₂CH₂—, —CH₂CH(CH₃)CH₂—, and —CH₂CH(CH₃)CH(CH₃)CH₂—.

The term “alkenylene,” as used herein, means a divalent group derived from a straight or branched chain hydrocarbon containing at least one carbon-carbon double bond. Representative examples of alkenylene include, but are not limited to, —CH=CH—, —CH₂CH=CH—, and —CH₂CH=CH(CH₃)—.

The term “alkynylene,” as used herein, means a divalent group derived from a straight or branched chain hydrocarbon containing at least one carbon-carbon triple bond. Representative examples of alkenylene include, but are not limited to, —CH=CH—, —CH₂CH=CH—, —CH₂CH=CH(CH₃)—, and —C≡C—CH₂CH(CH₃)CH₂—.

The term “alkoxy” as used herein, means an alkoxy group, as defined herein, appended to the parent molecular moiety through an oxygen atom. Representative examples of alkoxy include, but are not limited to, methoxy, ethoxy, propoxy, isoproxy, butoxy, isobutoxy, tert-butoxy, pentoxy, and hexoxy.
The term “alkylcarbonyl” as used herein, means an alkyl group, as defined herein, appended to the parent molecular moiety through a C(O) group.

The terms “haloalkyl,” “haloalkenyl,” and “haloalkynyl” as used herein, mean, respectively an alkyl, alkenyl, or alkynyl group, as defined herein, in which one, two, three, four, five, six, or seven hydrogen atoms are replaced by halogen. For example, representative examples of haloalkyl include, but are not limited to, 2-fluoroethyl, 2,2-difluoroethyl, trifluoromethyl, 2,2,2-trifluoroethyl, 2,2,2-trifluoro-1,1-dimethylmethyl, and the like.

The term “haloalkoxy,” as used herein, means an alkoxy group, as defined herein, in which one, two, three, four, five, or six hydrogen atoms are replaced by halogen. Representative examples of haloalkoxy include, but are not limited to, trifluoromethoxy, difluoromethoxy, 2,2,2-trifluoroethoxy, 2,2-difluoroethoxy, 2-fluoroethoxy, and pentfluoroethoxy.

The term “aryl,” as used herein, means phenyl or a bicyclic aryl. The bicyclic aryl is naphthyl, dihydrophenanthrenyl, tetrahydrophenanthrenyl, indanyl, or indenyl. The phenyl and bicyclic aryls are attached to the parent molecular moiety through any carbon atom contained within the phenyl or bicyclic aryl.

The term “heteroaryl,” as used herein, means a monocyclic heteroaryl or a fused bicyclic heteroaryl. The monocyclic heteroaryl is a 5 or 6 membered ring containing at least one heteroatom independently selected from the group consisting of O, N, and S. The 5-membered ring contains two double bonds, and one, two, three, or four heteroatoms as ring atoms. The 6-membered ring contains three double bonds, and one, two, three, or four heteroatoms as ring atoms. Representative examples of monocyclic heteroaryl include, but are not limited to, furanyl, imidazolyl, isoxazolyl, isothiazolyl, oxadiazolyl, oxazolyl, pyridinyl, pyridazinyl, pyrimidinyl, pyrazolyl, pyrrolyl, tetrazolyl, thiadiazolyl, thiazolyl, triazolyl, and triazines. The monocyclic heteroaryl is an 8- to 12-membered ring system having a monocyclic heteroaryl fused to an additional ring; wherein the additional ring may be aromatic or partially saturated, and may contain additional heteroatoms. Representative examples of bicyclic heteroaryl include, but are not limited to, benzofuranylan, benzoxazolyl, 1,3-benzothiazolyl, benzimidazolyl, benzoxazolyl, benzothienyl, chromenyl, furazidinyl, indolyl, indazolyl, isoxazolyl, naphtylidinyl, oxazolopyridine, quinolinyl, thienopyridinyl, 5,6,7,8-tetrahydroquinolinyl, 6,7-dihydro-5H-cyclopenaten[3,2-b]pyridinyl, and 2,3-dihydrofuro[3,2-b]pyridinyl. The monocyclic and the bicyclic heteroaryl groups are connected to the parent molecular moiety through any substitutable carbon atom or any substitutable nitrogen atom contained within the groups.

The term “cycloalkyl” as used herein, means a cyclic ring system containing 3, 4, 5, 6, 7, or 8 carbon atoms and zero heteroatoms as ring atoms, and zero double bonds. Examples of cycloalkyls include, but are not limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, and cyclooctyl. The cycloalkyl groups of the present invention may contain an alkylene bridge of 1, 2, 3, or 4 carbon atoms, linking two or more adjacent carbon atoms of the group. Examples of such bridged systems include, but are not limited to, bicyclo[2.2.1]heptanyl and bicyclo[2.2.2]octanyl. The cycloalkyl groups described herein can be appended to the parent molecular moiety through any substitutable carbon atom.

The term “heterocyclic” or “heterocyclic” as used herein, refers to a monocyclic heterocycle, a bicyclic heterocycle, or a spiroheterocyclic heterocycle. The monocyclic heterocycle is a 3, 4, 5, 6, 7, or 8-membered ring containing at least one heteroatom selected from O, N, or S. The 3 or 4 membered ring contains one heteroatom and optionally one double bond. The 5-membered ring contains zero or one double bond and one, two or three heteroatoms. The 6, 7, or 8-membered ring contains zero, one, or two double bonds, and one, two, or three heteroatoms. Representative examples of monocyclic heterocycle include, but are not limited to, azetidinyl, azepanyl, aziridinyl, diazepanyl, 1,3-dioxany, 1,4-dioxany, 1,3-dioxolanyl, 4,5-dihydrosorazole-5-yl, 3,4-dihydroprpyranoyl, 1,3-dithiolanyl, 1,3-dithianyl, imidazolyl, imidazolidinyl, isothiazolyl, isothiazolyl, oxazolyl, oxazolidinyl, morpholinyl, oxadiazolyl, oxadiazolidinyl, oxazolinyl, oxazolyl, oxetany, pipazinyl, piperidinyl, pyranoyl, pyrazolyl, pyrrolinyl, pyrrolidinyl, tetrahydrofuranoyl, tetrahydropyanyll, tetrahydrothienyl, thiadiazolyl, thiadiazoliny, thiazolyl, thiazolidinyl, thiomorpholinyl, 1,1-diothiothiomorpholinyl, thiopyranyl, and trithianyl. The bicyclic heterocycle is a 5-12-membered ring system having a monocyclic heterocycle fused to a phenyl, a saturated or partially saturated carbocyclic ring, or another monocyclic heterocyclic ring. Representative examples of bicyclic heterocycle include, but are not limited to, 1,1-benzodioxolyl-4-yl, 1,3-benzodithioly, 3-azabicyclo[3.1.0]hexany, hexahydo-1H-furo[3,4-c]pyrroly, 2,3-dihydro-1,4-benzodioxinyl, 2,3-dihydro-1-benzofuranoyl, 2,3-dihydro-1-benzothenyl, 2,3-dihydro-1-Indoloyl, and 1,2,3,4-tetrahydroquinolinyl. Spiroheterocycle means a 4, 5-, 6-, 7-, or 8-membered monocyclic heterocycle ring wherein two of the substituents on the same carbon atom form a 3-, 4-, 5-, or 6-membered monocyclic ring selected from the group consisting of cycloalkyl and heterocycle, each of which is optionally substituted with 1, 2, 3, 4, or 5 alkyl groups. Examples of a spiroheterocycle include, but are not limited to, 5-oxaspiro[3.4]octane and 8-azaspiro[4.5]decane. The monocyclic and bicyclic heterocycle groups of the present invention may contain an alkylene bridge of 1, 2, 3, or 4 carbon atoms, linking two non-adjacent atoms of the group. Examples of such a bridged heterocycle include, but are not limited to, 2-azabicyclo[2.2.1]heptanyl, 2-azabicyclo[2.2.2]octanoyl, 1,2,3,4-tetrahydro-1,4-methanoxaspirolinyl, and oxacyclo[2.2.1]heptanyl. The monocyclic, bicyclic, and spiroheterocycle heterocycle groups are connected to the parent molecular moiety through any substitutable carbon atom or any substitutable nitrogen atom contained within the group.

Terms such as “alkyl,” “cycloalkyl,” “alkylene,” etc. may be preceded by a designation indicating the number of atoms present in the group in a particular instance (e.g., 2-C5H10alkyl,” “2-C5H10cycloalkyl,” “2-C6H10alkynylene,” “2-C6H10alkenyleny”). These designations are used as generally understood by those skilled in the art. For example, the representation “C2” followed by a subscript number indicates the number of carbon atoms present in the group that follows. Thus, “C2alkyl” is an alkyl group with three carbon atoms (i.e., n-propyl, isopropyl). Where a range is given, as in “C2-C10alkyl,” the members of the group that follows may have any number of carbon atoms falling within the recited range. A “C2-C10alkyl,” for example, is an alkyl group having from 2 to 10 carbon atoms, however arranged.

A “patient” as used herein refers to a mammal (e.g., a human) or a bird having a condition that may be treated with compounds of the invention.

Compounds

According to a general aspect of the present invention, there are provided compounds useful as EP4 receptor ago-
nists, as well as compositions and methods relating thereto.
Compounds of the invention have the structure set forth in
formula (I), (Ia), or (II).

Formula (I) refers to compounds having either $\beta$ stereo-
chemistry or a substantially equal mixture of $\beta$ and $\alpha$
stereoisomerics at the $\gamma$-position of the lactam ring. Excluded are compounds having pure or substantially pure $\alpha$
stereoisomerics at the $\gamma$-position.

In some embodiments of the invention, $L_1$ is
$C_1C_1$-alkene, $C_1C_2$-alkene, or $C_1C_3$-alkyne,
wherein the $C_1C_2$-alkene, $C_1C_2$-alkyne, and $C_1C_3$-alkyne
is optionally substituted with 1, 2, 3, or 4 fluoro
substituents. In other embodiments, $L_1$ is
$C_1C_2$-alkyne, optionally substituted. In some groups
of compounds, $L_1$ is n-pentylene, n-hexylene, or n-heptylene
each optionally substituted with 1, 2, 3, or 4 fluoro
substituents. In subgroups of compounds, $L_1$ is n-hexylene.

In other embodiments, $L_1$ is
$-(CH_2)_nG_1-(CH_2)_p-$;
wherein $t$, $p$, and $G$ are as defined herein. In some groups of
compounds, $t$ and $p$ are both 0. In other groups of compounds,
t is 0 and $p$ is 0, 1, 2, or 3. In still other groups of
compounds, $p$ is 0 and $t$ is 0, 1, or 2.

In other embodiments, $L_1$ is
$-(CH_2)_nG_1-(CH_2)_p-$;
wherein $G_1$ is as defined herein, $n$ is 1, 2, 3, 4, or 5 and $p$
is 1, 2, or 3.

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
$-(CH_2)_nG_2-(CH_2)_p-$,
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
wherein $G_2$, $n$ and $p$ are as defined herein.

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
wherein $G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds, $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
$G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
$G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
$G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
$G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
or $-(CH_2)_nG_2-(CH_2)_p-$,
$G_2$, $n$ and $p$ are as defined herein. For example, in
some groups of compounds $G_2$ is

In still other embodiments, $L_1$ is
$-(CH_2)_nG_2-(CH_2)_p-$,
In other embodiments, L³ is —C=C—. In yet other embodiments, L³ is

In compounds of formula (I), (Ia), or (II), R⁴ and R⁵ are each independently H or C₁-C₄ alkyl (e.g., methyl, ethyl, etc.), wherein no more than one of R⁴ and R⁵ is H; or R⁴ and R⁵ together with the carbon to which they are attached form a C₄-C₅ cycloalkyl (e.g., cyclopropyl). In some embodiments R⁴ is C₁-C₄ alkyl (e.g., methyl, ethyl, etc.) and R⁵ is hydrogen. In yet other embodiments, R⁴ is hydrogen and R⁵ is C₁-C₄ alkyl (e.g., methyl, ethyl, etc.). In some embodiments, R⁴ is methyl and R⁵ is hydrogen. In other embodiments, R⁴ is hydrogen and R⁵ is methyl.

In the compounds of formula (I), (Ia), or (II), the stereochemistry of the hydroxyl group adjacent the carbon bearing the R⁴ and R⁵ groups may be either α or β or a mixture of α and β.

In some embodiments, L² is C₂-C₆ alkenylene or C₃-C₆ alkyne. The alkenylene and alkyne are optionally substituted with 1, 2, 3, or 4 fluoro substituents. In further embodiments, L² is C₂-C₆ alkenylene (e.g., ethylene, propylene, butylene, pentylene, etc.), optionally substituted. In some groups of compounds, L² is n-propylene. In some groups of compounds, L² is n-butylene. In some groups of compounds, L² is n-pentylene (or anylene). In still other embodiments, L² is C₂-C₆ alkenylene (e.g., ethylene, propylene, butylene, etc.).

In some embodiments of the invention, R⁶ is aryl or heteroaryl, each optionally substituted as described herein. In some groups of compounds, R⁶ is aryl, optionally substituted as described herein. In some groups of compounds, R⁶ is phenyl optionally substituted with halogen (e.g., fluoro, chloro), C₁-C₅ haloalkyl (e.g., CF₃), or —C₁-C₅ alkylene-C₁-C₅ alkoxy (e.g., CH₃OCH₂).

In one aspect of the invention, L¹-R¹ is C₂-C₆ alkenylene-R¹, wherein the C₂-C₆ alkenylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents; or L¹-R¹ is —(CH₂)ₙ—G²—(CH₂)ₚ—R¹, wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and R¹ is methyl, ethyl, hydrogen, or CF₃; or L¹-R¹ is —(CH₂)ₙ—C—G²—R¹, wherein n is 1, 2, 3, 4, or 5, and G² is

and n is 1. In certain subgroups of compounds G² is

and n is 1. In other subgroups, L¹ is —(CH₂)ₙ—C—G²—, G² is

and n is 1. In still other subgroups, L¹ is —(CH₂)ₙ—C(H) —C—G²—, G² is

In compounds of formula (I), (Ia), or (II), R¹ is COOR⁸, CONR⁹R¹⁰, CH₂OR⁹, SO₂R⁷, SO₂NR⁸R¹⁰, PO(OR⁹)₂, or tetrazol-5-yl; wherein R⁷ is H, C₁-C₄ alkyl (e.g., methyl, ethyl), or aryl (e.g., phenyl) and R¹⁰ is H, C₁-C₄ alkyl (e.g., methyl, ethyl), OR⁹, or SO₂R⁷; wherein R⁹ is C₁-C₄ alkyl (e.g., methyl, ethyl). In one group of compounds, R¹ is COOH or COOCH₃. In another group of compounds, R¹ is COOH.

In compounds of formula (I) or (Ia), L² is —C(R²)₂—C(R³)₂—, —C(R²)C(R³)—, or

wherein R² and R³ are each H, CH₃, fluoro, or chloro. In some embodiments, L² is —C(R²)₂—C(R³)₂— and R² and R³ are each hydrogen. In other embodiments, L² is —C(R²)C(R³)— and R² and R³ are each independently H, CH₃, fluoro, or chloro. In some groups of compounds, L² is —C(R²)C(R³)— and R² and R³ are hydrogen. In certain subgroups, L² is
wherein $G^2$ is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of $C_1$-$C_4$ aliphyl, $C_1$-$C_4$ haloalkyl, cyano, halogen, $C_1$-$C_4$ alkoxy, and $C_1$-$C_4$ haloalkoxy; $R^1$ is COOR; and $R^2$ is H or $C_1$-$C_4$ alkyl.

In one embodiment of this aspect of the invention $L^1$-$R^1$ is n-hexylene-COO$R^2$, $-(CH_2)_p-COO[R^2]$, $-(CH_2)_p-COO[R^2]$, or $-(CH_2)_p-COO[R^2]$, wherein $n$ is 2 or 3, $p$ is 0 or 1; $G^2$ is

and $R^9$ is H or CH$_3$. In another embodiment of this aspect of the invention $L^1$-$R^1$ is n-hexylene-COO$R^2$, $-(CH_2)_p-COO[R^2]$, or $-(CH_2)_p-COO[R^2]$, wherein $n$ is 2 or 3, $p$ is 0; $G^2$ is

and $R^9$ is H or CH$_3$. In another embodiment of this aspect of the invention $L^1$-$R^1$ is n-hexylene-COO$R^2$, $-(CH_2)_p-COO[R^2]$, or $-(CH_2)_p-COO[R^2]$, wherein $n$ is 2 or 3, $p$ is 0; $G^2$ is

In another embodiment of this aspect of the invention $L^1$-$R^1$ is $-(CH_2)_p-$COOH or $-(CH_2)_p-$COOH.

In another embodiment of this aspect of the invention $L^1$-$R^1$ is

and $R^9$ is H or CH$_3$. In another embodiment of this aspect of the invention $L^1$-$R^1$ is n-hexylene-COO$R^2$, $-(CH_2)_p-COO[R^2]$, or $-(CH_2)_p-COO[R^2]$, wherein $n$ is 2 or 3, $p$ is 0; $G^2$ is

In another embodiment of this aspect of the invention $L^1$-$R^1$ is $-(CH_2)_p-$COOH (i.e., $p$ is 0), $G^2$ is

In another embodiment of this aspect of the invention $L^1$-$R^1$ is $-(CH_2)_p-$COOH.

In another embodiment of this aspect of the invention $L^1$-$R^1$ is

and $R^9$ is H or CH$_3$. In another embodiment of this aspect of the invention, $L^1$-$R^1$ is $C_4$-$C$-alkylene-R and the alkyne is optionally substituted with 1-4 fluoro substituents. In one group of compounds, for example, $L^1$-$R^1$ is n-pentyylene-COO$R^2$, n-hexylene-COO$R^2$, p-heptylene-COO$R^2$, etc., and $R^9$ is H, CH$_3$, or CH$_2$CH$_3$. In one embodiment, $L^1$-$R^1$ is n-hexylene-COOH, n-hexylene-COOCH$_3$, or n-hexylene-COOCH$_2$CH$_3$.

In another embodiment of this aspect of the invention, $L^1$-$R^1$ is $-(CH_2)_p-$COOH or $-(CH_2)_p-$COOH. And $G^2$ is

In another embodiment, $L^1$-$R^1$ is $-(CH_2)_p-$COOH (i.e., $p$ is 0), $G^2$ is

In another embodiment, $L^1$-$R^1$ is

In yet another embodiment, $L^1$-$R^1$ is

In yet another embodiment, $L^1$-$R^1$ is $-(CH_2)_p-$COOH, $G^2$ is
n is 1, and R² is H or CH₃. In another embodiment, L¹-R¹ is -\((CH₂)_n\)-C(\(H\))-\(\geq\)-C\(\geq\)-C=G²-COOR², G² is

n is 1, and R² is H.

In another embodiment, L¹-R¹ is -(CH₂)ₙ-C(H)-\(\geq\)-C\(\geq\)-C=G²-COOR², G² is

n is 1, and R² is H or CH₃. In another embodiment, L¹-R¹ is -(CH₂)ₙ-C(H)-\(\geq\)-C\(\geq\)-C=G²-COOR², G² is

n is 1, and R² is H.

In another aspect of the invention, L² is C₂-C₆ alkyne, wherein the alkyne is optionally substituted with 1, 2, 3, or 4 fluoro substituents; L² is \(-\text{C(R²)}\)-\(\geq\)-C\(\geq\)-C=G²-R² and R² are each hydrogen; R² and R⁵ are independently H or C₁-C₄ alkyl, wherein no more than one of R² and R⁵ is \(\geq\); and R² is aryl or heteroaryl, wherein the aryl and heteroaryl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁-C₆ alkyl, C₁-C₆ haloalkyl, cyano, halogen, C₁-C₆ alkoxy, and C₁-C₆ haloalkoxy; and where R² is C₅-C₆ alkylne-C₁-C₃ alkyl.

In another aspect of the invention,
wherein R² and R³ are each H, CH₃, fluoro, or chloro; R⁴ and R⁵ are each independently H or C₁₋₄ alkyl wherein no more than one of R⁴ and R⁵ is H; or R⁴ and R⁵ together with the carbon to which they are attached form a C₃₋₅ cycloalkyl; L² is C₂₋₅ alkylene or C₂₋₅ alkenylene wherein the C₂₋₅ alkyne and C₂₋₅ alkenylene are optionally substituted with 1, 2, 3, or 4 fluoro substituents; R⁶ is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₄ alkyl, C₁₋₄ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In one embodiment according to the foregoing aspect of the invention, L² is

R² and R³ are independently H or C₁₋₄ alkyl, wherein no more than one of R² and R³ is H; L² is C₂₋₅ alkylene; and R⁶ is aryl; wherein the aryl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and C₁₋₅ alkenylene-C₁₋₅ alkoxy.

In one group of compounds according to the foregoing embodiment, L² is n-propylene; whereas in another group of compounds L² is n-butylene.

In one group of compounds according to the foregoing embodiment, L²-R¹ is C₃₋₅ alkylene-R¹; or L¹-R¹ is —(CH₂)ₙ-G¹-R¹, —(CH₂)ₙ—C—G²-R¹, or —(CH₂)ₙ—C(H)═C(H)⁻G²-R¹, wherein n is 1, 2, or 3 and p is 0, 1, or 2, and n+p is 1, 2, 3, or 4; G¹ is

R¹ is COOR⁸; R² is H or C₁₋₄ alkyl; one of R⁴ and R⁵ is CHₓ and the other is H; L² is ethylnylene, n-propylene, n-butyylene, or n-pentylen; and R⁶ is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In another group of compounds according to the foregoing embodiment, R⁴ and R⁵ are independently H or CH₃, wherein no more than one of R⁴ and R⁵ is H; R⁶ is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In one subgroup of compounds, L¹ is C₂₋₅ alkylene or —(CH₂)ₙ-G¹-G³—, wherein n is 2 or 3 and p is 0; and G² is

R¹ is COOR⁸; R² is H or C₁₋₄ alkyl; one of R⁴ and R⁵ is CHₓ and the other is H; L² is ethyl, n-propyl, n-butyl, or n-pentyl; and R⁶ is phenyl or C₁₋₄ alkyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy; and C₁₋₅ alkylene-C₁₋₅ alkoxy.

In another group of compounds according to the foregoing embodiment, L¹-R¹ is C₃₋₅ alkylene-R¹; or L¹-R¹ is —(CH₂)ₙ-G¹-R¹, —(CH₂)ₙ—C—G²-R¹, or —(CH₂)ₙ—C(H)═C(H)⁻G²-R¹, wherein G² is

L² is ethylene, n-propylene, n-butylen, or n-pentylen; and R⁶ is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy; and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In another group of compounds according to the foregoing embodiment, L¹-R¹ is C₃₋₅ alkylene-R¹; or L¹-R¹ is —(CH₂)ₙ-G¹-R¹, —(CH₂)ₙ—C—G²-R¹, or —(CH₂)ₙ—C(H)═C(H)⁻G²-R¹, wherein G² is

R¹ is COOR⁸; R² is H or C₁₋₄ alkyl; one of R⁴ and R⁵ is CHₓ and the other is H; L² is ethyl, n-propyl, n-butylen, or n-pentyl; and R⁶ is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In another group of compounds according to the foregoing embodiment, R⁴ and R⁵ are independently H or CH₃, wherein no more than one of R⁴ and R⁵ is H; R⁶ is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₅ alkyl, C₁₋₅ haloalkyl, cyano, halogen, C₁₋₅ alkoxy, C₁₋₅ haloalkoxy, and —C₁₋₅ alkylene-C₁₋₅ alkoxy.

In one group of compounds, L¹ is C₂₋₅ alkylene or —(CH₂)ₙ-G¹-G³—, wherein n is 2 or 3 and p is 0; and G² is
R¹ is methyl; R² is hydrogen; L² is ethylene, propylene, n-butylene, or n-pentylene; and R⁰ is phenyl or phenyl optionally substituted. In another subgroup of compounds, L¹ is C₃-C₅-alkylene; R⁴ is methyl; R⁵ is hydrogen; L² is ethylene, propylene, n-butylene, or n-pentylene; and R⁰ is phenyl or phenyl optionally substituted. In another subgroup of compounds, L¹ is \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 2 or 3; G}^2 \]
is

R¹ is methyl; R² is hydrogen; L² is ethylene, propylene, n-butylene, or n-pentylene; and R⁰ is phenyl or phenyl optionally substituted.

In another subgroup of compounds, L¹ is n-hexylene, \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2 or 3; p is 0 or 1, and n+p=2 or 3; G}^2 \]
is

R¹ is COOR³; R² is H or CH₃; L² is propylene or butylene; and R⁰ is phenyl.

In another subgroup of compounds, L¹ is C₃-C₅-alkylene, \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2 or 3; p is 0 or 1, and n+p=2 or 3; G}^2 \]
is

R¹ is methyl; R² is hydrogen; L² is ethylene, propylene, n-butylene, or n-pentylene; and R⁰ is phenyl or phenyl optionally substituted. In another subgroup of compounds, L¹ is n-hexylene, \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2 or 3; p is 0 or 1, and n+p=2 or 3; G}^2 \]
is

R¹ is COOR³; R² is H or CH₃; L² is propylene or butylene; and R⁰ is phenyl.

In another group of compounds according to the foregoing embodiment L¹ is C₃-C₅-alkylene, wherein the C₃-C₅-alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents.

In another subgroup of compounds according to the foregoing embodiment L¹ is \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6; and G}^2 \]
is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁-C₅-alkyl, C₆-C₉-haloalkyl, cyano, halogen, C₁-C₅-alkoxy, and C₆-C₉-haloalkoxy.

In a subgroup of compounds L² is n-propylene; and L¹ is C₃-C₅-alkylene, wherein the C₃-C₅-alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents. In another subgroup of compounds according to the foregoing embodiment L¹ is n-propylene; L² is \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6; and G}^2 \]
is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁-C₅-alkyl, C₆-C₉-haloalkyl, cyano, halogen, C₁-C₅-alkoxy, and C₆-C₉-haloalkoxy.

In another subgroup of compounds L² is n-butylene; and L¹ is C₃-C₅-alkylene, wherein the C₃-C₅-alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents. In another subgroup of compounds according to the foregoing embodiment L² is n-butylene; and L¹ is \[(\text{CH}_2)_n\text{-G}^2, \text{wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6; and G}^2 \]
is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁-C₅-alkyl, C₆-C₉-haloalkyl, cyano, halogen, C₁-C₅-alkoxy, and C₆-C₉-haloalkoxy.
wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁₋₃ alkyI, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, and C₁₋₃ haloalkoxy.

In another aspect, the invention provides a compound selected from the group consisting of:

- methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate;
- (Z)-methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enoate;
- methyl 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)ethyl)thio)butanoate;
- methyl 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 3-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid;
- (Z)-7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enoic acid;
- 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)ethyl)thio)butanoic acid;
- 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate;
- methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enolate;
- (Z)-methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enolate;
- methyl 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)ethyl)thio)butanoate;
- methyl 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylate;
- methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate;
- methyl 3-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)benzoate;
- 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid;
- (Z)-7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enolic acid;
- 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)ethyl)thio)butanoic acid;
- 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- methyl 5-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- methyl 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- methyl 3-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)benzoate;
- 4-((2(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thio)phene-2-carboxylic acid;
- 3-((3(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)benzoic acid;
methyl 7-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)heptanoate;
methyl 7-((S)-2-((3R,4R)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)heptanoate;
(Z)-methyl 7-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)hept-5-enoate;
methyl 4-(((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)ethyl)thio)butanoate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-1-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4R)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-3-((S)-2-((3R,4S)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;

recrystallization or chromatography, followed by liberation of the optically pure product; or (ii) separation of the mixture of enantiomers or diastereomers on chiral chromatographic columns.

Geometric isomers may exist in the present compounds. All various geometric isomers and mixtures thereof resulting from the disposition of substituents around a carbon-carbon double bond, a carbon-nitrogen double bond, a cycloalkyl group, or a heterocycle group are contemplated. Substituents around a carbon-carbon double bond or a carbon-nitrogen bond are designated as being of Z or E configuration and substituents around a cycloalkyl or a heterocycle are designated as being of cis or trans configuration.

It is to be understood that compounds disclosed herein may exhibit the phenomenon of tautomerism.

Thus, the formulae within this specification can represent only one of the possible tautomeric forms. It is to be understood that encompassed herein are any tautomeric form, and mixtures thereof, and is not to be limited merely to any one tautomeric form utilized within the naming of the compounds or formulae.

Additionally, unless otherwise stated, the structures depicted herein are also meant to include compounds that differ only in the presence of one or more isotopically enriched atoms. For example, compounds having the present structures except for the replacement of hydrogen by deuterium or tritium, or the replacement of a carbon by a $^{13}$C- or $^{14}$C-enriched carbon are within the scope of this invention. Such compounds are useful, for example, as analytical tools, probes in a biological assay, or as EP$_2$ receptor agonists.

Also contemplated as part of the invention are compounds formed by synthetic means or formed in vivo by biotransformation or by chemical means. For example, certain compounds of the invention may function as prodrugs that are converted to other compounds of the invention upon administration to a subject.

Methods of Treatment

The compounds of the invention are EP$_2$ receptor agonists and are useful in treating or preventing conditions or diseases responsive to an EP$_2$ receptor agonist. Conditions or diseases treatable with compounds of the invention include elevated intraocular pressure, glaucoma, ocular hypertension, dry eye, macular edema, macular degeneration, alopecia (alone or in combination with, for example, an L-PGDS inhibitor or an H-PGDS inhibitor or in combination with both an L-PGDS inhibitor and H-PGDS inhibitor; Gurza, L. a. et al, Science Translational Medicine, 2012, 4(126), 126ra34), cerebral vascular accident (Liang, X. et al, Journal of Clinical Investigation, 2011, 121(11), 4362-4371), brain damage due to trauma, neuropathic pain (e.g., diabetic neuropathy, sciatica, post-herpetic neuralgia, HIV-related neuropathy, trigeminal neuralgia, dactus arteriosus, chemotherapy-induced pain), low bone density due to osteoporosis (Cameron, K. O. et al, Bioorganic and Medicinal Chemistry Letters, 2006, 16, 1799-1802) or glucocorticoid treatment, bone fracture, and bone loss due to periodontal disease, surgical procedures, cancer, or trauma. Further uses of the compounds of the invention include use in increasing bone density in preparation of bone for receiving dental or orthopedic implants, coating of implants for enhanced osseointegration, and use in all forms of spinal fusion.

The present invention provides methods of treatment comprising administering to a patient in need thereof: (i) a therapeutically effective amount of a compound of formula (I), (la), or (II), or a pharmaceutically acceptable salt thereof, or a solvate of either; or (ii) a composition comprising any of the foregoing compound, salt, or solvate and a pharmaceutically acceptable carrier.

In one aspect, the invention provides a method of treating glaucoma, osteoporosis, bone fracture, low bone density due to periodontal disease, or neuropathic pain.

In another aspect, the invention provides a method of stimulating bone formation. According to this aspect of the invention, one embodiment provides a method of treating osteoporosis, bone fracture, and periodontal disease. In another embodiment, the compound or composition of the invention is administered alone. In still another embodiment, the compound or composition is administered in combination with one or more additional therapeutic agents to treat bone loss or osteoporosis. Compounds of the invention can be used in combination with other agents useful in treating or preventing bone loss such as an organic bisphosphonate (e.g., alendronic acid or sodium alendronate); a cathepsin K inhibitor; an estrogen or an estrogen receptor modulator; calcitonin; an inhibitor of osteoclast proton ATPase; an inhibitor of HMG-CoA reductase; an integrin receptor antagonist; a RANKL inhibitor such as denosumab; a bone anabolic agent, such as PTH; a bone morphogenetic agent such as BMP-2, BMP-4, and BMP-7; Vitamin D or a synthetic Vitamin D analogue such as ED-70; an androgen or an androgen receptor modulator, a SOST inhibitor; and the pharmaceutically acceptable salts and mixtures thereof.

A preferred combination is a compound of the present invention and an organic bisphosphonate.

In another aspect, the invention provides a method of lowering intraocular pressure. According to this aspect of the invention, one embodiment provides a method of treating glaucoma. In another embodiment, the compound or composition of the invention is administered alone. In still another embodiment, the compound or composition is administered in combination with one or more additional therapeutic agents that lower intraocular pressure such as a β-adrenergic blocking agent such as timolol, betaxolol, levobetaxolol, carteolol, levobunolol, a parasympathomimetic agent such as pilocarpine, a sympathomimetic agents such as epinephrine, lopidine, brimonidine, clonidine, or para-amino-phonidine, a carbonic anhydrase inhibitor such as dorzolamide, acetazolamide, metazolamide or brinzolamide; and a prostaglandin such as latanoprost, travoprost, or unoprostone, and the pharmaceutically acceptable salts and mixtures thereof.

In still another aspect, the invention provides a method of treating neuropathic pain. According to this aspect of the invention, one embodiment provides a method of treating diabetic neuropathy, sciatica, post-herpetic neuralgia, HIV-related neuropathy, trigeminal neuralgia, dactus arteriosus, chemotherapy-induced pain. In another embodiment, the compound or composition of the invention is administered alone. In still another embodiment, the compound or composition is administered in combination with one or more additional therapeutic agents that treat neuropathic pain such as gabapentin, pregabalin, duloxetine, and lamotrigine, and the pharmaceutically acceptable salts and mixtures thereof.

Compounds described herein can be administered as a pharmaceutical composition comprising the compounds of interest in combination with one or more pharmaceutically acceptable carriers. The phrase “therapeutically effective amount” of the present compounds means sufficient amounts of the compounds to treat disorders, at a reasonable benefit/risk ratio applicable to any medical treatment. It is understood, however, that the total daily dosage of the compounds
and compositions can be decided by the attending physician within the scope of sound medical judgment. The specific therapeutically effective dose level for any particular patient can depend upon a variety of factors including the disorder being treated and the severity of the disorder; activity of the specific compound employed; the specific composition employed; the age, body weight, general health and prior medical history, sex and diet of the patient; the time of administration, route of administration, and rate of excretion of the specific compound employed; the duration of the treatment; drugs used in combination or coincidental with the specific compound employed; and like factors well-known in the medical arts. For example, it is well within the skill of the art to start doses of the compound at levels lower than required to achieve the desired therapeutic effect and to gradually increase the dosage until the desired effect is achieved. Actual dosage levels of active ingredients in the pharmaceutical compositions can be varied so as to obtain an amount of the active compound(s) that is effective to achieve the desired therapeutic response for a specific patient and a particular mode of administration. In the treatment of certain medical conditions, repeated or chronic administration of compounds can be used to achieve the desired therapeutic response. “Repeated or chronic administration” refers to the administration of compounds daily (i.e., every day) or intermittently (i.e., not every day) over a period of days, weeks, months, or longer. In particular, the treatment of chronic painful conditions may require such repeated or chronic administration of the compounds. Compounds described herein may be more effective upon repeated or chronic administration such that the therapeutically effective doses on repeated or chronic administration can be lower than the therapeutically effective dose from a single administration.

Combination therapy includes administration of a single pharmaceutical dosage formulation containing one or more of the compounds described herein and one or more additional pharmaceutical agents, as well as administration of the compounds and each additional pharmaceutical agent, in its own separate pharmaceutical dosage formulation. For example, a compound described herein and one or more additional pharmaceutical agents, can be administered to the patient together, in a single oral dosage composition having a fixed ratio of each active ingredient, such as a tablet or capsule; or each agent can be administered in separate oral dosage formulations. Where separate dosage formulations are used, the present compounds and one or more additional pharmaceutical agents can be administered at essentially the same time (e.g., concurrently) or at separately staggered times (e.g., sequentially).

In one aspect of the invention, compounds of the invention, or a pharmaceutically acceptable salt thereof, or a solvate of either; or (ii) a composition comprising any of the foregoing compound, salt, or solvate and a pharmaceutically acceptable carrier are administered as the active pharmaceutical agent. In another aspect, compounds of the invention or a pharmaceutically acceptable salt thereof, or a solvate of either; or (ii) a composition comprising any of the foregoing compound, salt, solvate and a pharmaceutically acceptable carrier are administered to a subject and the administered compounds are converted to the active pharmaceutical agent in the subject by chemical or biotransformation.

Ophthalmic formulations of this compound may contain from 0.001 to 5% and especially 0.001 to 0.1% of active agent. Higher dosages as, for example, up to about 10% or lower dosages can be employed provided the dose is effective in reducing intraocular pressure, treating glaucoma, increasing blood flow velocity or oxygen tension. For a single dose, from between 0.001 to 5.0 mg, preferably 0.005 to 2.0 mg, and especially 0.005 to 1.0 mg of the compound can be applied to the human eye.

Compounds may be administered orally once or several times per day each in an amount of from 0.001 mg to 100 mg per adult, preferably about 0.01 to about 10 mg per adult. Compounds may also be administered parenterally once or several times per day each in an amount of from 0.1 mg to 10 mg per adult or continuously administered into a vein for 1 hour to 24 hours per day. Compounds may also be administered locally to stimulate bone formation in an amount from 0.0001 μg to 500 μg.

Pharmaceutical Compositions

Pharmaceutical compositions comprise compounds described herein, pharmaceutically acceptable salts thereof, or solvates of either. The pharmaceutical compositions comprising the compound, salt, or solvate described herein can be formulated together with one or more non-toxic pharmaceutically acceptable carriers, either alone or in combination with one or more other medicaments as described hereinabove.

Pharmaceutical compositions of the present invention may be manufactured by processes well known in the art, e.g., by means of conventional mixing, dissolving, granulating, dragee-making, levigating, emulsifying, encapsulating, entrapping or lyophilizing processes.

The pharmaceutical compositions can be administered to humans, other mammals, and birds orally, rectally, parenterally, intracerebrally, intravaginally, intraperitoneally, topically (as by powders, ointments or drops), buccally or as an oral or nasal spray. The term “parenterally” as used herein, refers to modes of administration which include intravenous, intramuscular, intraperitoneal, intrasternal, subcutaneous and intraarticular injection and infusion.

The pharmaceutical compositions can further be administered to humans, other mammals, and birds locally to the desired site of action; for example, into a bone void such as a tooth socket defect, adjacent to an alveolar bone, or a bone defect caused by surgery, trauma, or disease.

The term “pharmaceutically acceptable carrier” as used herein, means a non-toxic, inert solid, semi-solid or liquid filler, diluent, encapsulating material or formulation auxiliary of any type. Some examples of materials which can serve as pharmaceutically acceptable carriers are sugars such as, but not limited to, lactose, glucose and sucrose; starches such as, but not limited to, corn starch and potato starch; cellulose and its derivatives such as, but not limited to, sodium carboxymethyl cellulose, ethyl cellulose and cellulose acetate; powdered tragacanth; malt; gelatin; talc; excipients such as, but not limited to, cocoa butter and suppository waxes; oils such as, but not limited to, peanut oil, cottonseed oil, safflower oil, sesame oil, olive oil, corn oil and soybean oil; glycols; such a propylene glycol; esters such as, but not limited to, ethyl oleate and ethyl laureate; agar; buffering agents such as, but not limited to, magnesium hydroxide and aluminum hydroxide; alginic acid; pyrogen-free water; isotonic saline; Ringer’s solution; ethyl alcohol, and phosphate buffer solutions, as well as other non-toxic compatible lubricants such as, but not limited to, sodium lauryl sulfate and magnesium stearate, as well as coloring agents, releasing agents, coating agents, sweetening, flavor-
Solid compositions of a similar type can also be employed as fillers in soft and hard-filled gelatin capsules using such carriers as lactose or milk sugar as well as high molecular weight polyethylene glycols and the like.

The solid dosage forms of tablets, dragees, capsules, pills, and granules can be prepared with coatings and shells such as enteric coatings and other coatings well-known in the pharmaceutical formulating art. They can optionally contain opacifying agents and can also be of a composition such that they release the active ingredient(s) only, or preferentially, in a certain part of the intestinal tract, optionally, in a delayed manner. Examples of embedding compositions which can be used include polymeric substances and waxes.

The active compounds can also be in micro-encapsulated form, if appropriate, with one or more of the above-mentioned carriers.

Liquid dosage forms for oral administration include pharmaceutically acceptable emulsions, solutions, suspensions, syrups and elixirs. In addition to the active compounds, the liquid dosage forms can contain inert diluents commonly used in the art such as, for example, water or other solvents, solubilizing agents and emulsifiers such as ethyl alcohol, isopropyl alcohol, ethyl carbonate, ethyl acetate, benzyl alcohol, benzyl benzoate, propylene glycol, 1,3-butanediol glycol, dimethyl formamide, oils (in particular, cottonseed, groundnut, corn, germ, olive, castor and sesame oils), glycercol, tetrahydrofurfuryl alcohol, polyethylene glycols and fatty acid esters of sorbitan and mixtures thereof.

Besides inert diluents, the oral compositions can also include adjuvants such as wetting agents, emulsifying and suspending agents, sweetening, flavoring and perfuming agents.

Suspensions, in addition to the active compounds, can contain suspending agents as, for example, ethoxylated isostearyl alcohols, polyoxyethylene sorbitol and sorbitan esters, poly(lactic-co-glycolic acid), microcrystalline cellulose, aluminum metaphosphate, bentonite, agar-agar, tragacanth, collagen sponge, demineralized bone matrix, and mixtures thereof.

The compounds can also be administered in the form of liposomes. As is known in the art, liposomes are generally derived from phospholipids or other lipid substances. Liposomes are formed by mono- or multi-lamellar hydrated liquid crystals which are dispersed in an aqueous medium. Any non-toxic, physiologically acceptable and metabolizable lipid capable of forming liposomes can be used. The present compositions in liposome form can contain, in addition to compounds described herein, stabilizers, preservatives, excipients and the like. The preferred lipids are natural and synthetic phospholipids and phosphatidyl cholines (lecithins) used separately or together. Methods to form liposomes are known in the art. See, for example, Prescott, Ed., Methods in Cell Biology, Volume XIV, Academic Press, New York, N.Y. (1976), p. 33 et seq.

Dosage forms for topical administration of compounds described herein include powders, sprays, ointments and inhalants. The active compounds can be mixed under sterile conditions with a pharmaceutically acceptable carrier and any needed preservatives, buffers or propellants which can be required. Ophthalmic formulations, eye ointments, powders and solutions are also contemplated as being within the scope.

The compounds can be used in the form of pharmaceutically acceptable salts derived from inorganic or organic acids. The phrase “pharmaceutically acceptable salt” means those salts which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of
humans and lower animals without undue toxicity, irritation, allergic response and the like and are commensurate with a reasonable benefit/risk ratio.

Pharmaceutically acceptable salts are well known in the art. For example, S. M. Berge et al. describe pharmaceutically acceptable salts in detail in (J. Pharmaceutical Sciences, 1977, 66: 1 et seq). The salts can be prepared in situ during the final isolation and purification of the compounds or separately by reacting a free base function with a suitable organic acid. Representative acid addition salts include, but are not limited to acetate, adipate, alginate, citrate, aspartate, benzoate, benzenesulfonate, bisulfate, butyrate, camphorate, camphorsulfonate, dglucarate, glyceroxophosphate, hemisulfate, hexanoate, hexylate, fumarate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate (sulfonate), lactate, maleate, maleic, methanesulfonate, nicotinate, 2-naphthalenesulfonate, oxalate, palmitate, pectinate, per sulfate, 3-phosphoglycerate, pyrophosphate, succinate, tartarate, thionicarbonate, phosphate, phthalate, bicarbonate, p-toluensulfonate and undecanoate. Also, the basic nitrogen-containing groups can be quaternized with such agents as lower alkyl halides such as, but not limited to, methyl, ethyl, propyl, and butyl chlorides, bromides and iodides; dialkyl sulfates like dimethyl, diethyl, dibutyl and diethyl sulfates; long chain halides such as, but not limited to, decyl, lauryl, myristyl and stearyl chlorides, bromides and iodides; aroylalkyl halides like benzyl and phenethyl bromides and others. Water or oil-soluble or dispersible products are thereby obtained. Examples of acids which can be employed to form pharmaceutically acceptable acid addition salts include such inorganic acids as hydrochloric acid, hydrobromic acid, sulfuric acid, and phosphoric acid and such organic acids as acetic acid, fumaric acid, maleic acid, 4-methylbenzenesulfonic acid, succinic acid and citric acid.

Basic addition salts can be prepared in situ during the final isolation and purification of compounds by reacting a carboxylic acid-containing moiety with a suitable base such as, but not limited to, the hydroxide, carbonate or bicarbonate of a pharmaceutically acceptable metal cation or with ammonia or an organic primary, secondary or tertiary amine. Pharmaceutically acceptable salts include, but are not limited to, cations based on alkali metals or alkaline earth metals such as, but not limited to, lithium, sodium, potassium, calcium, magnesium and aluminum salts and the like and nontoxic quaternary ammonium and amine cations including ammonium, tetramethylammonium, tetraethylammonium, methylamine, dimethylamine, trimethylamine, triethylamine, diethylamine, ethylamine and the like. Other representative organic amines useful for the formation of base addition salts include ethylenediamine, ethanolamine, diethanolamine, piperidine, piperazine and the like.

Compounds described herein can exist in unsolvated as well as solvated forms, including hydrated forms, such as hemi-hydrates. In general, the solvated forms, with pharmaceutically acceptable solvents such as water and ethanol, among others, are equivalent to the unsolvated forms.

CHEMISTRY AND EXAMPLES

Unless otherwise defined herein, scientific and technical terms used in connection with the exemplary embodiments shall have the meanings that are commonly understood by those of ordinary skill in the art.

Further, unless otherwise required by context, singular terms shall include plurals and plural terms shall include the singular. Generally, nomenclature used in connection with, and techniques of chemistry and molecular biology described herein are those well-known and commonly used in the art.

It will be appreciated that the synthetic schemes and specific examples are illustrative and are not to be read as limiting the scope of the invention. Optimum reaction conditions and reaction times for each individual step may vary depending on the particular reactants employed and substituents present in the reactants used. Unless otherwise specified, solvents, temperatures and other reaction conditions may be readily selected by one of ordinary skill in the art. The skilled artisan will also appreciate that not all of the substituents in the compounds of formula (I), (Ia), or (II) will tolerate certain reaction conditions employed to synthesize the compounds. Routine experimentation, including appropriate manipulation of the reaction conditions, reagents and sequence of the synthetic route, protection and deprotection steps may be required in the case of particular compounds.

Suitable protecting groups and the methods for protecting and deprotecting substitutions using such suitable protecting groups are well known to those skilled in the art; examples of which may be found in T. Greene and P. Wuts, Protective Groups in Chemical Synthesis (3d ed.), John Wiley & Sons, NY (1999), which is incorporated herein by reference in its entirety.

Furthermore, the skilled artisan will appreciate that in some cases, the order in which moieties are introduced may vary. The particular order of steps required to produce the compounds of formula (I), (Ia), (II) is dependent upon the particular compounds being synthesized, the starting compound, and the relative stability of the substituted moieties. Thus, synthesis of the present compounds may be accomplished by methods analogous to those described in the synthetic schemes described herein and in the specific examples, with routine experimentation (e.g., manipulation of the reaction conditions, reagents, and sequence of the synthetic steps).

Starting materials, if not commercially available, may be prepared by procedures selected from standard organic chemical techniques, techniques that are analogous to the synthesis of known, structurally similar compounds, or techniques that are analogous to the above described schemes or the procedures described in the synthetic examples section.

When an optically active form of a compound is required, it may be obtained by carrying out one of the procedures described herein using an optically active starting material (prepared, for example, by asymmetric induction of a suitable reaction step), or by resolution of a mixture of the stereoisomers of the compound or intermediates using a standard procedure (such as chromatographic separation, recrystallization or enzymatic resolution).

Similarly, when a pure geometric isomer of a compound is required, it may be obtained by carrying out one of the above procedures using a pure geometric isomer as a starting material, or by resolution of a mixture of the geometric isomers of the compound or intermediates using a standard procedure such as chromatographic separation.

Systematic names of compound structures have been generated by the Convert-Structure-to-Name function of Chem & Bio Draw 12.0 Ultra by CambridgeSoft®, which uses the Cahn-Ingold-Prelog rules for stereochemistry. When discussing individual atomic positions of compound structures, an alternative continuous numbering scheme for the lactams as described below may be used.
Liquid chromatography—mass spectra (LC/MS) were obtained using an Agilent LC/MSD G1946D or an Agilent 5900 Series LC/MSD Trap G2435A. Quantifications were obtained on a Cary 50 Bio UV-visible spectrophotometer.

1H, 13C, and 19F Nuclear magnetic resonance (NMR) spectra were obtained using a Varian INOVA nuclear magnetic resonance spectrometer at 400, 100, and 376 MHz, respectively.

High performance liquid chromatography (HPLC) analytical separations were performed on an Agilent 1100 or Agilent 1200 HPLC analytical system and followed by an Agilent Technologies G1315B Diode Array Detector set at or near the UVmax 260 nm.

High performance liquid chromatography (HPLC) preparatory separations were performed on a Gilson preparative HPLC system or an Agilent 1100 preparative HPLC system and followed by an Agilent Technologies G1315B Diode Array Detector set at or near the UVmax 260 nm.

Analytical chiral HPLC separations were performed on an Agilent 1100 analytical system and followed by an Agilent Technologies G1315B Diode Array Detector set at or near the UVmax 260 nm.

Thin layer chromatography (TLC) analyses were performed on Uniplate™ 250 silica gel plates (Analtech, Inc. Catalog No. 02521) and were typically developed for visualization using a diluted sulfuric acid spray like 50 volume % in water or 10 volume % in methanol. When used in the present application, the following abbreviations have the meaning set out below:

Ac is acetyl; ACN is acetonitrile; BBr₃ is boron tribromide; 
Bn is benzyl; BnNH₂ is benzylamine; 
BSA is bovine serum albumin; 
CH₂Cl₂ is dichloromethane; 
CHCl₃ is chloroform; 
CDCl₃ is deuteriochloroform; 
CSA is camphorsulfonic acid; 
DCC is N,N'-dicyclohexylcarbodiimide; 
DMF is 1,2-dimethoxyethane; 
DMF is N,N-dimethylformamide; 
DMSO is dimethyl sulfoxide; 
DBU is 1,8-diazabicyclo[5.4.0]undec-7-ene; 
DIA is diisopropylamine; 
DMAP is 4-dimethylaminopyridine; EDC/EDAC is N-(3-dimethylaminopropyl)-N'-ethylcarbodiimide hydrochloride; 
EDTA is ethylenediaminetetraacetic acid; 
EE is ethanol-1-yl; ee is enantiomeric excess; 
EIA is enzyme immunoassay; 
Et is ethyl; 
EtOAc is ethyl acetate; 
ETOH is ethanol; 
Et₂N is triethylamine; 
HCl is hydrogen chloride; 
HOBT is 1-hydroxybenzotriazole; 
Me is methyl; 
MeOH is methanol; MTBE is methyl tert-butyl ether; 
NaOMe is sodium methoxide; nBuLi or n-BuLi is n-butyllithium; 
NHS is N-hydroxysuccinimide; NMP is 1-methyl-2-pyrrolidinone; 
PG is a protecting group; Ph is phenyl;
Pd(Ph₃)₄ is tetrakis(triphenylphosphine)palladium; PhMe is toluene; it is room temperature; TBAF is tetrabutylammonium fluoride; TBS or TBDMS is tert-butyl(dimethyl)silyl; tBu or t-Bu is tert-buty; TFA is trifluoroacetic acid; THF is tetrahydrofuran; TMS is trimethylsilyl; and Tris-HCl is 2-amino-2-(hydroxymethyl)-1,3-propanediol hydrochloride.

Compounds of the present invention may be prepared from commercially available 5-oxopyrrolidine-2-carboxylic acid (pyroglutamic acid) (1) by general routes illustrated in Scheme 1.

Compounds of the present invention, (I), may be prepared from 1, for example, by a process that comprises first installing the lower chain with a carbon-carbon bond forming reaction, wherein the hydroxymethyl group carbon atom attached to the γ-position of the lactam ring of starting material 1 forms a covalent bond (carbon-carbon single, double, or triple bond) with the appropriate lower chain carbon atom to provide the corresponding compound (I).

Alternatively, compounds of the present invention, (I), may be prepared from 1, for example, by a process that comprises first installing the lower chain with a carbon-carbon bond forming reaction, wherein the hydroxymethyl group carbon atom attached to the γ-position of the lactam ring of starting material 1 forms a covalent bond (carbon-carbon single, double, or triple bond) with the appropriate lower chain carbon atom to provide the corresponding 1+lower chain intermediate shown in Scheme 1. The installation of the lower chain may be followed by a process that comprises installation of the upper chain by way of nitrogen-carbon bond forming reaction, wherein the nitrogen atom of

![Scheme 1](image)

**R**⁺ is hydrogen or an oxygen protecting group
**R**⁻ is hydrogen or a nitrogen protecting group
certain intermediate 1-upper chain may undergo chemical reaction or a series of chemical reactions, which are known in the art or disclosed herein, that chemically modify the upper chain such that at least one particular functional group or other structural feature not incorporated into said intermediate is incorporated into the structure of invention compound (I).

In some aspects of the present invention, the synthetic route to a compound (I) comprises a process wherein certain intermediates 1-lower chain may undergo chemical reaction or a series of chemical reactions, which are known in the art or disclosed herein, that chemically modify the lower chain such that chemical installation and/or modification of the upper chain is facilitated.

In further aspects of the present invention, the synthetic route to a compound (I) comprises a process wherein a certain intermediate 1-lower chain may undergo chemical reaction or a series of chemical reactions, which are known in the art or disclosed herein, that chemically modify the lower chain such that at least one particular functional group or other structural feature not incorporated into said intermediate is incorporated into the structure of invention compound (I).

Synthetic routes utilized to prepare compounds of the present invention typically proceed through a carbon-carbon double bond formation (olefination) step to install the compound's lower chain. The olefination may be accomplished by the interaction of an appropriate aldehyde intermediate with an appropriate nucleophilic carbonanion species. Such methods may include Wittig reactions, wherein the nucleophilic carbonanion species is an appropriate organic phosphonium ylide. Another carbon-carbon bond forming reaction that may be employed is a Horner-Wadsworth-Emmons reaction, wherein the coupling partner with the aldehyde is an appropriate organic phosphonate carbamion. Published reviews describing the general scope and mechanism along with various protocols for these types of olefination reactions include the following:

Another carbon-carbon bond forming reaction that may be used to install the lower chain is the Peterson olefination reaction, which is reviewed by Ager, D. J. *Organic Reactions*, 1990, 38, 1-223.

Aldehydes that may be used in the olefination step involved in preparation of compounds of the present invention include, but are not limited to, intermediates 6a-f, which can be generally prepared from (R)-(−)-5-oxopyrrolidine-2-carboxylic acid (D-pyroglutamic acid) as shown in Scheme 2.
D-pyroglutamic acid may be esterified (Step A) and subsequently reduced (Step B) by known methods, including those described herein, to provide the resulting alcohol intermediate (R)-1. The hydroxy moiety of intermediate (R)-1 may be protected (Step C) by reacting with ethyl vinyl ether (EVE) in the presence of TFA or tert-butyldimethylsilyl chloride (TBDMSCl or TBSCI) in the presence of a base, such as imidazole, to provide the EE-protected or TBS-protected species (2), respectively. N-alkylation of one of the protected pyrrolidone intermediates (2) with an alkylating agent, such as one of 3a-f, affords the corresponding intermediate 4a-f (Step D). Alcohol deprotection (Step E) and subsequent controlled alcohol oxidation (Step F) provides the corresponding aldehyde intermediates 5a-f that may be employed in the subsequent olefination step.

The aldehydes 6a-f may also be prepared from commercially available (R)-di-tert-butyl 2-aminopentanedioate 7 according to the route illustrated in Scheme 3. Condensation of 7 with bromides 3a-f provides 8a-f, respectively (Step A). Subsequent ring closure provides pyrrolidinone intermediates 9a-f (Step B). Removal of the tert-butyl group with TFA (Step C) unmask the carboxylic acid moiety of intermediates 10a-f. Mixed anhydride formation by reacting these carboxylic acids with isobutyl chloroformate and subsequent reduction of the mixed anhydride with sodium borohydride (Step D) provides alcohol intermediates 5a-f. Controlled oxidation of the alcohol group of each of the compounds 5a-f provides aldehydes 6a-f as illustrated in Scheme 2, Step F.

The aldehyde (R)-methyl 4-(2-(2-formyl-5-oxopyrrolidin-1-yl)ethyl)benzoate (6b) may be prepared from commercially available (R)-di-tert-butyl 2-aminopentanedioate (7) and aldehyde 11 where the key reductive alkylation step is shown below in Scheme 4. Condensation of 7 with methyl 4-(2-oxoethyl)benzoate (11) accompanied with subsequent ring closure provides pyrrolidinone intermediate 9b (Step A and B). Deesterification of 9b, as shown generally in Scheme 3, Step C, followed by reduction (Scheme 3, Step D) and subsequent controlled oxidation as generally shown in Scheme 2, Step F produces aldehyde 6b.
Aldehyde intermediate 6f may alternatively be acquired by the hydrogenation of protected alcohol intermediates 4d or 4e to 4f or the unprotected alcohol intermediates 5d or 5e to 5f, followed by the subsequent deprotection (for 4f) and controlled oxidation to 6f. One hydrogenation reaction example is illustrated in Scheme 5. Palladium-catalyzed reduction of the internal carbon-carbon double bond of intermediate 5e (Scheme 3) to provide alcohol intermediate 5f followed by the controlled oxidation of the alcohol affords aldehyde intermediate 6f as illustrated in Scheme 2, Step F.

To a solution consisting of (R)-5-oxoppyrrolidine-2-carboxylic acid (D-pyroglutamic acid methyl ester) from (R)-5-oxoppyrrolidine-2-carboxylic acid (D-pyroglutamic acid) 3.7 v/v) afforded the title intermediate (13.3 g, 95%) as a clear oil; TLC Rf 0.42 (solvent system: 3.7 v/v acetone-dichloromethane). 1H-NMR (CDCl3) δ 4.25 (t, 1H), 3.73 (s, 3H), 2.5-2.2 (m, 4H).

Scheme 2, Step B: Preparation of (R)-5-(hydroxymethyl)pyrrolidin-2-one ((R)-1)

To a solution consisting of (R)-methyl 5-oxoppyrrolidine-2-carboxylate (D-pyroglutamic acid methyl ester, 13.2 g, 115 mmol) in methanol (100 mL) at 0°C was added sodium borohydride (10.5 g, 278 mmol) in portions. The reaction mixture was stirred at 0°C until completion, at which time,
acetic acid (3 mL) was added. The reaction mixture was concentrated and the residue was purified on silica gel, eluting with methanol-chloroform (1:9 v/v) to afford the title intermediate (12.9 g, 97%) as a colorless solid; TLC Rf 0.33 (solvent system: 1:9 v/v methanol-chloroform); 1H-NMR (CDCl3) δ 7.17 (s, 1H), 3.92 (s, 1H), 3.85-3.75 (m, 1H), 3.64-3.40 (m, 2H), 2.42-2.35 (m, 2H), 2.2-2.05 (m, 1H), 1.88-1.7 (m, 1H).

Scheme 2, Step C: Preparation of (5R)-5-((1-ethoxyethoxy)methyl)pyrrolidin-2-one (2/EE)

To a solution consisting of (R)-5-((hydroxymethyl)pyrrolidin-2-one (intermediate (R)-1, 21.7 g, 188 mmol) in dichloromethane (250 mL) was added ethyl vinyl ether (36.2 mL, 376 mmol) followed by trichloroacetic acid (0.878 g, 5.37 mmol). The reaction mixture was stirred at room temperature for 16 hours. The reaction mixture was added to a saturated solution of sodium bicarbonate (400 mL) and the organic phase was separated. The organic phase was subsequently washed with water (200 mL) and brine (200 mL), dried over anhydrous sodium sulfate, filtered, and concentrated. The residue was purified by silica gel chromatography eluting with methanol-chloroform (1:9 v/v) to afford the title intermediate (13.0 g, 37%) as a clear oil; TLC Rf 0.56 (solvent system: 1:9 v/v methanol-chloroform); 1H-NMR (CDCl3) δ 4.69 (quartet, 1H), 3.83-3.2 (m, 5H), 2.35 (t, 2H), 2.25-2.19 (m, 1H), 1.8-1.7 (m, 1H), 1.38 (d, 3H), 1.21 (t, 3H).

Scheme 2, Step E: Preparation of (R)-methyl 7-(2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)heptanoate (5a)

To a solution consisting of (R)-5-((hydroxymethyl)pyrrolidin-2-one (intermediate (R)-1, 5.7 g, 50 mmol) in dimethylsulfoxide (50 mL) was added tert-butyldimethylchlorosilane (9.71 g, 64.5 mmol) followed by imidazole (4.39 g, 64.5 mmol). The reaction mixture was stirred at room temperature overnight. The reaction mixture was quenched with water (50 mL) and extracted with ethyl acetate (3×100 mL). The combined organic phase was dried over anhydrous sodium sulfate, filtered, and concentrated. The residue was purified by silica gel chromatography eluting with methanol-chloroform (5:95 v/v) to afford the title intermediate (10.0 g, 85%) as a clear oil; TLC Rf 0.37 (solvent system: 5:95 v/v methanol-chloroform).

To an ice-chilled suspension consisting of sodium hydride (60% in mineral oil, 1.07 g, 26.7 mmol) and iodine (4.40 g, 29.4 mmol) in hexamethylphosphoramide (30 mL) was added dropwise a solution consisting of (5R)-5-((1-ethoxyethoxy)methyl)pyrrolidin-2-one (intermediate 2/EE, 5.00 g, 26.7 mmol) in hexamethylphosphoramide (20 mL). The mixture was stirred at room temperature for two hours followed by 50°C for 20 minutes. To the reaction mixture was added dropwise methyl 7-bromohexanoate (commercially available from Afa Asesor, 7.15 g, 32.0 mmol) and stirred overnight at 50°C. The mixture was diluted with ethyl acetate (300 mL). Concentrated aqueous hydrochloric acid (10 mL) was subsequently added followed by water (50 mL). The aqueous phase was separated and the organic layer was washed with 5% aqueous sodium thiosulfate (100 mL), water (200 mL), and brine (300 mL), and was dried over anhydrous sodium sulfate, filtered and evaporated to provide the crude title intermediate, which was carried on to the next step without further purification or characterization.
Scheme 2. Step F: Preparation of (R)-methyl 7-(2-formyl-5-oxopyrrolidin-1-yl)heptanoate (6a)

To a solution consisting of (R)-methyl 7-(2-hydroxymethyl)-5-oxopyrrolidin-1-yl)heptanoate (intermediate 5a, 1.24 g, 4.82 mmol) in dichloromethane (25 mL) was added Dess-Martin periodinane (2.04 g, 4.82 mmol) in portions and the mixture was stirred at room temperature until completion as monitored by TLC. The volatiles were evaporated, and to the residual mixture was added diethyl ether (50 mL). The solid material was filtered through a thin pad of Celite and the filtrate was concentrated. The residue was purified on silica gel eluting with methanol-ethyl acetate (3:97 v/v) to afford the title intermediate (1.1 g, 89%) as a pale yellow oil; TLC Rf 0.33 (solvent system: 3:97 v/v methanol-ethyl acetate).

Preparation of (R)-methyl 4-(2-(2-formyl)-5-oxopyrrolidin-1-yl)ethylbenzoate (6b)

Scheme 4. Steps A and B: Preparation of (R)-tert-butyl 1-(4-(methoxycarbonyl)phenethyl)-5-oxopyrrolidine-2-carboxylate (9b)

Step A

To a solution consisting of (R)-di-tert-butyl 2-aminopenicillanatoate (reagent 7, 11-D-GLu(OrBu)-OrBu, commercially available from Life Tech Inc, 3.50 g, 15.6 mmol) in methanol (100 mL) was added methyl 4-(2-oxoethyl)benzoate (synonym: 4-carboxymethylphenylacetalddehyde, reagent 11; obtained from methyl 4-formyl benzoate as described in Nair et al., J. Med. Chem., 1989, 32, 1277-1283; 2.80 g, 15.6 mmol), acetic acid (1.05 mL, 2.67 mmol), and sodium cyanoborohydride (1.45 g, 23.1 mmol), and the mixture was stirred at room temperature for three hours. The reaction mixture was diluted with ethyl acetate and washed with water and brine, dried over sodium sulfate, filtered, and concentrated under reduced pressure.

Step B

The residue (crude intermediate 8b) was diluted with xylene and the solution refluxed for 5 hours and concentrated. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (1:1) to afford the title compound (2.0 g, 37%) as a white solid; TLC Rf 0.45 (solvent system 1:1 v/v ethyl acetate-heptane).

Scheme 3, Step C: Preparation of (R)-1-(4-(methoxycarbonyl)phenethyl)-5-oxopyrrolidine-2-carboxylic acid (10b)

A mixture consisting of (R)-tert-butyl 1-(4-(methoxycarbonyl)phenethyl)-5-oxopyrrolidine-2-carboxylate (intermediate 9b, 2.0 g, 5.7 mmol), trifluoroacetic acid (25 mL), and water (0.125 mL) was stirred for three hours at room temperature and was subsequently concentrated in vacuo to afford the crude title intermediate (2.26 g) as a yellow oil, which was used in the next step without purification.

Scheme 3, Step D: Preparation of (R)-methyl 4-(2-(2-hydroxymethyl)-5-oxopyrrolidin-1-yl)ethylbenzoate (5b)

To a stirring mixture consisting of crude (R)-1-(4-(methoxycarbonyl)phenethyl)-5-oxopyrrolidine-2-carboxylic acid (intermediate 10b, 2.26 g, 8.14 mmol) in THF (40 mL) at -10 °C, was added N-methylmorpholine (0.9 mL, 8 mmol). After stirring for five minutes, isobutyl chloroformate (1.08 mL, 8.25 mmol) was added dropwise and the reaction mixture was stirred for an additional thirty minutes and was subsequently filtered through a pad of Celite. The filtrate was cooled to -10 °C, and a solution consisting of sodium borohydride (0.434 g, 11.5 mmol) predissolved in water (15 mL) was added. The resulting mixture was stirred at 0 °C for one hour and then at room temperature for one hour. The mixture was poured into a separatory funnel and
diluted with ethyl acetate (200 mL). The organic layer was washed sequentially with 1N hydrochloric acid solution, saturated sodium bicarbonate solution, and brine, was dried over sodium sulfate, filtered, and concentrated. The residue was purified by silica gel chromatography eluting with methanol-ethyl acetate (3:97 v/v) to afford the title compound as an off white solid; TLC Rf 0.19 (solvent system 3:97 v/v methanol-ethyl acetate); MS (APCI+) m/z 278 (M+1).

Scheme 2, Step F: Preparation of (R)-methyl 4-(2-(2-formyl-5-oxyprrolidin-1-yl)ethyl)benzoate (6b)

(R)-Methyl 4-(2-(2-formyl-5-oxyprrolidin-1-yl)ethyl)benzoate (0.246 g, 62.5%) was prepared by the method described in Scheme 2, Step F for the preparation of aldehyde intermediate 6a except that (R)-methyl 4-(2-(hydroxymethyl)-5-oxyprrolidin-1-yl)ethylbenzoate (5b) was used instead of (R)-methyl 7-(2-(hydroxymethyl)-5-oxyprrolidin-1-yl)heptanoate; TLC Rf 0.29 (solvent system 3:97 v/v methanol-ethyl acetate).

Preparation of (R)-methyl 2-(4-(2-formyl-5-oxyprrolidin-1-yl)methyl)phenyl acetate (6c)

A stirring mixture consisting of (R)-di-tert-butyl 2-amino-5-oxopentanedioate (reagent 7, H-D-Clu(OtBu)-OtBu, 5.0 g, 16.9 mmol), methyl 2-(4-(bromomethyl)phenyl)acetate (reagent 3c, 4.52 g, 18.6 mmol); prepared in 99% yield from the corresponding carboxylic acid and trimethylsilylidiazomethane according to known methods such as those described in Leggio, A. et al., *Chemical Biology & Drug Design*, 2009, 73(3), 287-291, disopropylthylamine (8.83 mL, 50.7 mmol), and sodium iodide (2.53 g, 16.9 mmol) in dry hexamethylphosphoramide (50 mL) was heated at 55 °C for 15 hours. The reaction mixture was cooled, diluted with ethyl acetate (1.5 L), and washed sequentially with an aqueous solution of ammonium chloride and a saturated aqueous solution of sodium chloride. The organic phase was dried over sodium sulfate and concentrated in vacuo. The residue was purified by silica gel chromatography eluting with a gradient of ethyl acetate-heptane (1:20 to 1:5 v/v) to afford the title intermediate (5.78 g, 81%) as a colorless oil; TLC Rf 0.45 (solvent system 1:3 v/v ethyl acetate-heptane); MS (APCI+) m/z 422 (M+1).

Scheme 3, Step B: Preparation of (R)-tert-butyl 1-(4-(2-methoxy-2-oxoethyl)benzyl)-5-oxopryrolidine-2-carboxylate (9c)

A stirring mixture consisting of (R)-di-tert-butyl 2-((4-(2-methoxy-2-oxoethyl)benzyl)amino)pentanedioate (intermediate 8c, 5.75 g, 13.6 mmol) in o-xylene (40 mL) was heated at 100 °C for three days. The solvent was evaporated under reduced pressure and the residue was purified by silica gel chromatography eluting with a gradient of ethyl acetate-heptane (1:20 to 1:1 v/v) to afford the title intermediate (3.09 g, 65.2%) as a colorless oil; TLC Rf 0.6 (solvent system 4:6 v/v ethyl acetate-heptane); MS (APCI+) m/z 370 (M+23, Na+).

Scheme 3, Step C: Preparation of (R)-1-(4-(2-methoxy-2-oxoethyl)benzyl)-5-oxopryrolidine-2-carboxylic acid (10c)

A stirring mixture consisting of (R)-tert-butyl 1-((4-(2-methoxy-2-oxoethyl)benzyl)-5-oxopryrolidine-2-carboxylate (intermediate 9c, 2.93 g, 8.43 mmol) and trifluoroacetic acid (4.55 mL, 59.0 mmol) in dichloromethane (30 mL) was heated at 45 °C for seven hours with subsequent stirring at room temperature overnight. The reaction mixture was diluted with ethanol and evaporated under reduced pressure. The crude residue (2.44 g) was carried onto the next step (Step D) without purification.
(R)-Methyl 2-((2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)methyl)phenylacetate (6c)

Preparation of (R)-methyl 5-((2-hydroxyethyl)-5-oxopyrrolidin-1-yl)ethyl thiophene-2-carboxylate (6d)

To a covered mixture consisting of methyl 5-bromo-2-thiophene carboxylate (5.6 g, 25 mmol) in benzene (60 mL) was added a suspension consisting of tetrais(triphenylphosphine)palladium (0) (1.4 g, 1.3 mmol) in benzene (10 mL), and the reaction mixture was stirred for 30 minutes. To the reaction mixture was then added copper(I) iodide (480 mg, 2.52 mmol) and n-butylamine (5 mL, 50 mmol) in one portion each, followed by propargyl alcohol (2.2 mL, 38 mmol) in benzene (30 mL) over 15 minutes, and the reaction was stirred for 24 hours. To the reaction mixture was added a saturated solution of ammonium chloride (200 mL) and the organic material was extracted with ethyl acetate. The organic phase was washed with water, then brine, dried over sodium sulfate, filtered, and concentrated. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptanes (1:10 v/v) to afford the title intermediate (3.8 g, 78%). TLC Rf 0.7 (solvent system 1:1 v/v ethyl acetate-heptanes); 1H-NMR (CDCl3) δ 7.6 (d, 1H), 7.1 (d, 1H), 4.5 (s, 2H), 3.9 (s, 3H), 2.0 (br s, 1H).

Step 3: Preparation of methyl 5-(3-bromoprop-1-yn-1-yl)thiophene-2-carboxylate (3d)

To an ice cooled solution of 5-(3-hydroxyprop-1-yn-1-yl)thiophene-2-carboxylate (1.32 g, 6.73 mmol) in dichlo-
romethane (25 ml) was added carbon tetrabromide (3.1 g, 9.42 mmol) and triphenylphosphine (2.5 g, 9.42 mmol) and the mixture stirred for 4 hours. The solvent was removed and the residue was purified by silica gel chromatography eluting with ethyl acetate/heptanes (1:25 v:v) to afford the title compound (1.5 g). TLC Rf 0.65 (solvent system 80:20 v/v heptanes:ethyl acetate); 1H-NMR (CDCl3) δ 7.6 (d, 1H), 7.1 (d, 1H), 4.1 (s, 2H), 3.9 (s, 3H).

Scheme 3, Step A: Preparation of (R)-di-tert-butyl 2-((3-(5-methoxycarbonyl)thiophen-2-yl)prop-2-yn-1-yl)amino)pentanedioate (8d)

(R)-Di-tert-butyl 2-((3-(5-methoxycarbonyl)thiophen-2-yl)prop-2-yn-1-yl)amino)pentanedioate was prepared in the same manner as compound 8c in Scheme 3, Step A except that methyl 5-(3-bromoprop-1-yn-1-yl)thiophene-2-carboxylate (3d) was used instead of methyl 2-(4-(bromomethyl)phenyl)acetate; TLC Rf 0.45 (solvent system 80:20 v/v heptanes:ethyl acetate); 1H-NMR (CDCl3) δ 7.7 (d, 1H), 6.9 (d, 1H), 3.9 (s, 3H), 3.3-3.2 (m, 1H), 3.2 (s, 2H), 2.4 (t, 2H), 2.0-1.8 (m, 2H), 1.45 (d, 18H).

Scheme 3, Step B: Preparation of (R)-tert-butyl 1-(3-(5-methoxycarbonyl)thiophen-2-yl)prop-2-yn-1-yl)-5-oxopyrrolidine-2-carboxylate (9d)

(R)-Tert-butyl 1-(3-(5-methoxycarbonyl)thiophen-2-yl)prop-2-yn-1-yl)-5-oxopyrrolidine-2-carboxylate was prepared in the same manner as compound 9c in Scheme 3, Step B except that (R)-di-tert-butyl 2-((3-(5-methoxycarbonyl)thiophen-2-yl)prop-2-yn-1-yl)amino)pentanedioate (8d) was used instead of (R)-di-tert-butyl 2-((4-(2-methoxy-2-oxoethyl)benzyl)amino)pentanedioate; TLC Rf 0.25 (solvent system 60:40 v/v heptanes:ethyl acetate); 1H-NMR (CDCl3) δ 7.7 (d, 1H), 6.9 (d, 1H), 4.5-4.4 (m, 1H), 4.2-4.0 (m, 2H), 3.85 (s, 3H), 2.6-2.5 (m, 1H), 2.4-2.2 (m, 2H), 2.1-2.0 (m, 1H), 1.4 (s, 9H).
(R)-Methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate was prepared in the same manner as compound 6a in Scheme 2, Step F except that (R)-methyl 5-(3-(2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate (7d) was used instead of (R)-methyl 7-(2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)heptanoate; TLC R<sub>f</sub> 0.30 (solvent system 95:5 v/v dichloromethane:methanol).

Preparation of (R,Z)-methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thiophene-2-carboxylate (9e)

Step 1: Preparation of (Z)-methyl 5-(3-hydroxyprop-1-en-1-yl)thiophene-2-carboxylate

To a mixture consisting of methyl 5-(3-hydroxyprop-1-yn-1-yl)thiophene-2-carboxylate (1.9 g, 9.7 mmol) in ethyl acetate (50 mL) and methanol (5 mL) was added palladium on calcium carbonate (5%, 1.5 g). The reaction flask was evacuated and backfilled with hydrogen gas and the reaction mixture was subsequently stirred for 2 hours while maintaining a hydrogen atmosphere. The mixture was then filtered through Celite and the solvent removed. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptanes (1:10 v/v) to afford the title intermediate (1.5 g); TLC R<sub>f</sub> 0.65 (solvent system 1:1 v/v ethyl acetate-heptanes); MS (ESI<sup:+</sup>) m/z 221 (M+Na<sup>+</sup>); <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 7.7 (d, 1H), 6.9 (d, 1H), 6.6 (d, 1H), 6.0-5.9 (m, 1H), 4.6 (d, 2H), 3.9 (s, 3H), 1.9 (br s, 3H).

Step 2: Preparation of (Z)-methyl 5-(3-bromoprop-1-en-1-yl)thiophene-2-carboxylate (3e)

(Z)-Methyl 5-(3-bromoprop-1-en-1-yl)thiophene-2-carboxylate (2.56 g) was prepared in the same manner as compound 3d except that (Z)-methyl 5-(3-hydroxyprop-1-en-1-yl)thiophene-2-carboxylate was used instead of 5-(3-hydroxyprop-1-yn-1-yl)thiophene-2-carboxylate; TLC R<sub>f</sub> 0.60 (solvent system 20:80 v/v ethyl acetate-heptanes); MS (ESI<sup:+</sup>) m/z 261, 263 (isotopic bromines, each is (M+H<sup>+</sup>)); <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 7.7 (d, 1H), 7.2 (d, 1H), 6.6 (d, 1H), 6.2-6.0 (m, 1H), 4.3 (d, 2H), 3.9 (s, 3H).

Scheme 3. Step A: Preparation of (R,Z)-di-tert-butyl 2-(3-(5-(methoxycarbonyl)-thiophen-2-yl)allyl)amino)pentanedioate (8e)

(R,Z)-Di-tert-butyl 2-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)amino)pentanedioate was prepared in the same manner as compound 8c in Scheme 3, Step A, except that (Z)-methyl 5-(3-bromoprop-1-en-1-yl)thiophene-2-carboxylate (3e) was used instead of methyl 2-[(4-bromomethyl)phenyl]acetate; TLC R<sub>f</sub> 0.30 (solvent system 1:4 v/v ethyl acetate-heptanes); MS (ESI<sup:+</sup>) m/z 440 (M+1); <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 7.7 (d, 1H), 6.9 (d, 1H), 6.6 (d, 1H), 5.9-5.8 (m, 1H), 3.9 (s, 3H), 3.7-3.5 (m, 2H), 2.4 (6H). 1.5 (s, 9H).

Scheme 3. Step B: Preparation of (R,Z)-tert-butyl 1-(3-(5-(methoxycarbonyl)-thiophen-2-yl)allyl)-5-oxopyrrolidin-2-carboxylate (9e)

(R,Z)-tert-Butyl 1-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)-5-oxopyrrolidin-2-carboxylate was prepared in the same manner as compound 9c in Scheme 3, Step B except that (R,Z)-di-tert-butyl 2-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)amino)pentanedioate (8e) was used instead of (R)-di-tert-butyl 2-[(4-(2-methoxy-2-oxoethyl)benzyl)amino]pentanedioate; TLC R<sub>f</sub> 0.20 (solvent system 2:3 v/v ethyl acetate-heptanes); MS (ESI<sup:+</sup>) m/z 366 (M+1), 388 (M+Na<sup>+</sup>); <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 7.7 (d, 1H), 6.9 (d, 1H), 6.6 (d, 1H), 5.7-5.6 (m, 1H), 4.5-4.4 (m, 1H), 4.2-4.0 (m, 2H), 3.85 (s, 3H), 2.6-2.5 (m, 1H), 2.4-2.2 (m, 2H), 2.1-2.0 (m, 1H), 1.4 (s, 9H).
Scheme 3, Step C: Preparation of (R,Z)-1-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)-5-oxopyrrolidine-2-carboxylic acid (10e)

A stirring mixture consisting of (R,Z)-tert-butyl 1-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)-5-oxopyrrolidine-2-carboxylate (intermediate 9e, 2.05 g, 5.61 mmol) and trifluoroacetic acid (5.0 mL, 65 mmol) in dichloromethane (40 mL) was heated at 45°C overnight. The reaction mixture was diluted with ethanol and evaporated under reduced pressure to provide a residue (2.44 g) that was used in the next step (Scheme D) without further purification. TLC Rf 0.25 (solvent system 50:50:1 v/v ethyl acetate-heptanes-acetic acid).

Scheme 3, Step D: Preparation of (R,Z)-methyl 5-(3-(2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thiophene-2-carboxylate (5e)

(R,Z)-Methyl 5-(3-(2-(hydroxymethyl)-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thiophene-2-carboxylate was prepared in the same manner as compound 5b in Scheme 3, Step D except that (R,Z)-1-(3-(5-(methoxycarbonyl)thiophen-2-yl)allyl)-5-oxopyrrolidine-2-carboxylic acid (10e) was used instead of (R)-1-(4-(methoxycarbonyl)phenethyl)-5-oxopyrrolidine-2-carboxylic acid and triethylamine was used instead of N-methylmorpholine; TLC Rf 0.20 (solvent system 50:50:1 v/v ethyl acetate-heptanes-acetic acid); MS (ESI+)

m/z 296 (M+1), 318 (M+Na+); 1H NMR (CDCl3) δ 7.6 (d, 1H), 6.9 (d, 1H), 6.6 (d, 1H), 6.1-5.6 (m, 1H), 4.5-4.3 (m, 1H), 4.1-4.0 (m, 1H), 3.85 (s, 3H), 3.7 (s, 2H), 3.6-3.5 (m, 1H), 3.2-3.0 (br s, 1H), 2.6-2.4 (m, 1H), 2.4-2.3 (m, 1H), 2.2-2.0 (m, 1H), 2.0-1.9 (m, 1H).

Scheme 2, Step F: Preparation of (R,Z)-methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thiophene-2-carboxylate (6e)

To a solution of (R,Z)-methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)prop-1-en-1-yl)thiophene-2-carboxylate (5e, 496 mg) in ethyl acetate (40 mL) and methanol (4 mL) was added palladium on carbon (10%, 40 mg) and the flask evacuated and exposed to hydrogen for 4 hours. The mixture was then filtered through Celite and the solvent removed to afford the title intermediate in a quantitative yield, which was used without purification. TLC Rf 0.25 (solvent system 95:5 v/v dichloromethane:methanol);

1H NMR (CDCl3) δ 7.6 (d, 1H), 6.6 (d, 1H), 3.85 (s, 3H), 3.8 (d, 1H) 3.75-3.65 (m, 2H), 3.6 (d, 1H), 3.1 (m, 1H), 2.85 (t, 2H), 2.7-2.4 (br s, 1H), 2.5-2.4 (m, 1H), 2.35-2.25 (m, 1H), 2.1-1.8 (m, 4H); MS (ESI+) m/z 298.0 (M+1), 320.0 (M+Na+)

Scheme 2, Step F: Preparation of (R)-methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate (6f)
(R)-Methyl 5-(3-(2-formyl-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate was prepared in the same manner as compound 6a in Scheme 2, Step F except that (R)-methyl 5-(3-(2-hydroxymethyl-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate (5f) was used instead of (R)-methyl 7-(2-hydroxymethyl-5-oxopyrrolidin-1-yl)heptanoate; TLC Rf 0.25 (solvent system 95:5 v/v dichloromethane: methanol).

Organic β-keto phosphate esters such as 13d-l may be used as reaction coupling partners with aldehydes such as 6a-l in a Horner-Emmons-Wadsworth-type process to install the lactam lower-chain scaffold. Such phosphate esters may be prepared by coupling an appropriate carboxylic ester 12a-l with lithiated/deprotonated dimethyl methylphosphonate according to the general reaction illustrated in Scheme 6 and variations thereof. Esters 12a-l may be commercially available or prepared from commercially-available starting materials as shown in Schemes 7a-e.

As illustrated in Scheme 7a, a 2-(C1-C4 alkyl) or 2-unsubstituted diethyl malonate may be alkylated with propargyl bromides to provide the corresponding 2-propargylated diethyl malonate intermediates 14a-c (Step A). Subsequent decarboxylation (Step B) provides the corresponding ester intermediate 12a, wherein both R4 and R5 are hydrogen, or intermediate mixture 12b-c, wherein one of R4 and R5 is a C1-C4 alkyl group and the other is a hydrogen. The 2-(C1-C4 alkyl) diethyl malonates, also referred to as diethyl (C1-C4 alkyl) malonates, may either be purchased or prepared from diethyl malonate. Examples of diethyl (C1-C4 alkyl) malonates that may be purchased include diethyl methyl malonate, diethyl ethyl malonate, diethyl isopropyl malonate, diethyl n-propyl malonate, diethyl n-butyl malonate (all from Sigma-Aldrich, Acros Organics, or Alfa Aesar), diethyl isobutyl malonate, and diethyl sec-butyl malonate (both from Alfa Aesar). Methods for preparing the starting diethyl (C1-C4 alkyl) malonates are known in the art; for example, diethyl malonate may be combined with a base such as potassium carbonate and an appropriate alkylating agent such as methyl iodide, ethyl iodide, n-propyl bromide, or n-butyl bromide under microwave irradiation in the method described by Keglevich et al. in *Letters in Organic Chemistry*, 2008, 5(3), 224-228 and in *Green Chemistry*, 2006, 8(12), 1073-1075. Other methods that may be used to prepare the diethyl (C1-C4 alkyl) malonates include the reaction of diethyl malonate with an appropriate alkylating agent such as ethyl iodide, isopropyl bromide, isobutyl bromide, or sec-butyl bromide in the presence of a base such as sodium ethoxide in an organic solvent such as ethanol as described in Patel and Ryono in *Bioorganic and Medicinal Chemistry Letters*, 1992, 2(9), 1089-1092 and elsewhere.

Scheme 7b illustrates alkylations of ethyl phenyl(C1-C6) alkanolate esters 12f with an alkylating agent R52-X2, wherein the R52/R53 group is a C1-C4 alkyl group and X2 is a leaving group such as iodide or bromide to provide α-alkylated esters 12c-e, g-l.

Enantiopure esters 12b and 12c may be prepared as illustrated in Scheme 7c. Alkylation of appropriately-substituted carboxylic acids, such as propionic acid (R2R3COOH is a methyl group), at the carbon position alpha to the acid carbonyl group by treatment of the acid with an appropriate base, such as lithium disopropylamide (about two molar equivalents) in the presence of a suitable solvent, such as THF, with (3-bromoprop-1-yn-1-yl)benzene (Step A) and subsequent coupling of the resulting α-carboxylic acid phosgene with N-hydroxy succinimide (NHS) forms the corresponding NHS ester (an activated ester) enantiomeric mixture 16b/16c (Step B). Displacement of the activated ester enantiomeric mixture 16b/16c with (R)-2-amino-2-phenylethanol in THF results in the mixture of two amide diastereomers 17b and 17c (Step C), which may be separated by chromatography to provide each pure diastereomer (Step D). Amide hydrolysis of each diastereomer to its corresponding carboxylic acid 18b and 18c, respectively (Steps E1 and E2, respectively), and subsequent esterification (Steps F1 and F2, respectively) provides individual ester enantiomers 12b and 12c, respectively.

Scheme 7d describes the preparation of saturated enantiopure esters 12d-g,i,k by a route very similar to that illustrated in Scheme 7c for the acetylene esters 12b and 12c.

Scheme 7e shows a synthetic pathway to enantiopure esters 12d,g,i,k employing the use of the chiral auxiliary for more-efficient (asymmetric) alkylation in Step C. Removal of the chiral auxiliary (Step D) following alkylation and subsequent derivatization (Steps E and F) provides the diastereomers separable by chromatography and further purified by crystallization (Step G). Acid-catalyzed amide hydrolysis (Step H) and subsequent esterification (Step I) provide highly-pure and highly enantiomerically pure esters 12g,i,k.

Schemes 8a, 8b, and 8c illustrate the conversions of esters 12a-l to β-keto phosphonates 13a-l by way of the addition of lithiated dimethyl methyl phosphonate to the starting esters. Schemes 8a and 8b particularly show the formation of acetylene β-keto phosphonates 13a-c (Step A) and subsequent catalytic hydrogenation (Step B) to corresponding β-keto phosphonates 13f-h. Scheme 8b more particularly illustrates the conversion of the enantiopure acetylene α-methyl ester 12b(i) (R5 is methyl and R5 is hydrogen) to the corresponding acetylene-κ-phosphonate 13b(i) (Step A) and subsequent catalytic hydrogenation (Step B) to provide the enantiopure β-keto phosphonate 13g(i). Scheme 8c shows the conversion of saturated ester intermediates of varying chain length 12d-l to the corresponding saturated β-keto phosphonates 13d-l.

Filtered, and concentrated. The residue was purified by silica gel chromatography eluting with a gradient of ethyl acetate-hexane (1:1 to 65:35 v/v) to afford the title intermediate (1.5 g, 53%); $^1$H-NMR (CDCl$_3$): 6 7.29-7.23 (m, 2H), 7.19-7.13 (m, 3H), 3.76 (d, 6H, J=11.1 Hz), 3.06 (d, 2H, J=22.6 Hz), 2.55-2.7 (m, 4H), 1.55-1.7 (m, 4H).

Alternative preparation of dimethyl (2-oxo-6-phenylhexyl)phosphonate (13i)

Scheme 7a, Step A: Preparation of diethyl 2-(3-phenylprop-2-yn-1-yl)malonate (14a)

Preparation of dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f)

Scheme 8c: Preparation of dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f) from methyl 5-phenylvalerate (121)

To a solution consisting of dimethyl methylphosphonate (2.0 g, 10.1 mmol) in THF (60 mL) at -78°C, was slowly added n-butyllithium (4.4 mL, 10.1 mmol, 2.5 M solution in hexane). The mixture was stirred for 90 minutes, at which time a solution comprising methyl 5-phenylvalerate (Sigma-Aldrich, 1.9 g, 10 mmol) was added slowly, and the reaction mixture was allowed to warm to -10°C while stirring over 5 hours. The reaction mixture was poured into 0.5 N HCl. The organic material was extracted twice with ethyl acetate. The organic phase was washed with water and a saturated solution of sodium chloride, dried over magnesium sulfate, and filtered. The residue was purified by silica gel chromatography eluting with ethyl acetate-hexane (5:95 v/v) to afford the title intermediate (2.74 g, 53%, 2 steps); TLC R$_f$ 0.26 (solvent system: 5:95 v/v ethyl acetate-hexane).
Scheme 8a, Step A: Preparation of dimethyl (2-oxo-6-phenylhex-5-yn-1-yl)phosphonate (13a)

To a solution consisting of dimethyl methylphosphonate (2.6 g, 14 mmol) in THF (150 mL) at -78°C, was slowly added n-butyllithium (12.7 mL, 20.3 mmol, 1.6 M solution in hexane). The mixture was stirred for 45 minutes, at which time ethyl 5-phenylpent-4-ynoate (12a, 2.74 g, 13.5 mmol) was added slowly, and the reaction mixture was stirred for 2 hours. The reaction mixture was carefully treated with a 5% aqueous solution of potassium hydrogen sulfate and a 50% saturated aqueous sodium chloride solution. The organic material was extracted with diethyl ether, dried over sodium sulfate, and concentrated under vacuum. The residue was purified by silica gel chromatography eluting with ethyl acetate-hexane (80:20 v/v) to afford the title intermediate (2.12 g, 56%); TLC Rf 0.2 (solvent system: 80:20 v/v ethyl acetate-hexane); MS (EI+) m/z 281 (M+1).

Scheme 8a, Step B: Preparation of dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f)

Dimethyl (2-oxo-6-phenylhex-5-yn-1-yl)phosphonate (13a) is hydrogenated over 10% palladium on activated carbon in methanol by stirring under an atmosphere of hydrogen over night. The hydrogen is evacuated and the mixture is filtered through a micro pore filter. The filtrate is concentrated in vacuo to afford the title intermediate.

Preparation of phosphonate esters 13b-c-g-h(i)

Scheme 7a, Step A: Preparation of diethyl 2-methyl-2-(3-phenylprop-2-yn-1-yl)malonate [14b/c(i)]

To a stirring mixture consisting of diethyl 2-methylmalonate (Sigma-Aldrich, 3.7 g, 21 mmol) in THF (200 mL) at -78°C, was slowly added lithium bis-(trimethylsilyl)amide (1 M in THF, 23.6 mL, 23.6 mmol) and the resulting reaction mixture was stirred at -78°C for 40 minutes. To the reaction mixture was added a mixture consisting of (3-bromoprop-1-yn-1-yl)benzene (4.6 g, 24 mmol, prepared from the corresponding alcohol using PBr₃/pyridine method) in THF (50 mL), and the mixture was stirred for another hour at -78°C, and was then allowed to warm to room temperature over night. The mixture was quenched with 1 N HCl (40 mL) and extracted twice with diethyl ether. The organic phase was washed twice with water, then with brine, was dried over magnesium sulfate, filtered, and concentrated to afford the title intermediate (6.78 g, quantitative yield) as a yellow oil.

Scheme 7a, Step B: Preparation of (±)-ethyl 2-methyl-5-phenylpent-4-ynoate [12b/c(i)]

The title intermediate was prepared in the manner similar to that of ethyl 5-phenylpent-4-ynoate (12a) through the decarboxylation of diethyl 2-methyl-2-(3-phenylprop-2-yn-1-yl)malonate [14b/c(i)] under the conditions of lithium chloride, water and DMSO. The crude product was purified by silica gel chromatography eluting with a gradient of ethyl acetate-hexane (1:99 to 7:93 v/v) to afford the racemic title intermediate (3.2 g, 70%, 2 steps).

Scheme 8a, Step A: Preparation of (±)-dimethyl (3-methyl-2-oxo-6-phenylhex-5-yn-1-yl)phosphonate [13b/c(i)]

The title β-keto phosphonate intermediate was prepared from (±)-ethyl 2-methyl-5-phenylpent-4-ynoate [12b/c(i)] in a manner similar to that of intermediate dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f) as described above to afford a clear oil (2.4 g, 55%); 1H-NMR (CDCl₃) δ 7.35-7.45 (m, 2H), 7.2-7.3 (m, 3H), 3.85-3.75 (m, 6H), 3.25 (d, 2H), 3.0-3.2 (m, 1H), 2.5-2.7 (m, 2H), 1.25 (d, 3H); MS (EI+) m/z 295.1 (M+1).
A racemic mixture consisting of (±)-dimethyl (3-methyl-2-oxo-6-phenylhex-5-yn-1-yl)phosphonate [13g(e)], (1.0 g, 3.4 mmol) and 10% palladium on activated carbon (15 mg) in methanol (30 mL) was stirred under an atmosphere of hydrogen over night. The hydrogen was evacuated and the mixture was filtered through a micropore filter. The filtrate was concentrated in vacuo to afford the title racemic β-keto phosphonate intermediate (1.0 g, quantitative yield) as a clear oil; 1H-NMR (CDCl3) δ 7.3-7.25 (m, 2H), 7.2-7.1 (m, 1H), 3.8-3.7 (m, 6H), 3.1 (d, 2H), 2.8-2.75 (m, 1H), 2.7-2.5 (m, 2H), 1.8-1.65 (m, 1H), 1.65-1.5 (m, 2H), 1.4-1.3 (m, 1H), 1.1 (d, 3H); MS (ESI+) m/z 299 (M+1).

Schemes 7d & 8c: Preparation of dimethyl (S)-(−)-(3-methyl-2-oxo-6-phenylhexyl)phosphonate [13g]

Scheme 7d, Step A: Preparation of (±)-2-methyl-5-phenylpentanoic acid

To a solution consisting of diisopropylamine (218.25 mL, 1557.3 mmol) in THF (400 mL) at −50°C was added n-butyllithium (628 mL, 393 mmol, 1.6 M solution in hexane). The mixture was stirred for 5 minutes and was subsequently allowed to warm to −20°C. To the reaction mixture was added dropwise a solution consisting of propionic acid (44.7 g, 603 mmol) in HMBA (102 mL). The mixture was stirred at room temperature for 30 minutes, cooled to 0°C, and treated with a mixture consisting of 1-bromo-3-phenylpropane (100 g, 502 mmol) in THF (200 mL). The mixture was stirred at room temperature for 2 hours. The reaction mixture was diluted with water and extracted with ethyl acetate. The aqueous layer was separated and then acidified with 2 M HCl until acidic. The aqueous layer was then extracted three times with ethyl acetate, and the organic layers were combined and dried over sodium sulfate, filtered, and concentrated to provide the title intermediate (105 g, quantitative yield) as a clear oil; TLC Rf 0.44 (solvent system: 25:75:1 v/v/v ethyl acetate-heptane-acetic acid).

Scheme 7d, Step B: Preparation of (±)-2,5-dioxopyrrolidin-1-yl 2-methyl-5-phenylpentanoate [16g(h)]

To a solution consisting of (±)-2,5-dioxopyrrolidin-1-yl 2-methyl-5-phenylpentanoate (16g(h)), 85.6 g, 296 mmol) in THF (3000 mL) at 48°C was added R-(−)-2-phenylglycinol (65.9 g, 480 mmol, Bridge Organics) in portions, and the mixture stirred at 48°C for 40 hours. The white precipitate was filtered from the reaction mixture and washed with THF. The filtrate was concentrated under vacuum and the residue, comprising the diastereomeric pair, was chromatographed on silica gel eluting with ethyl acetate-heptane (50:50 v/v). The stereoreplicate intermediate was obtained (31.3 g; 34% as a colorless solid; TLC Rf 0.22 (solvent system: 50:50 v/v ethyl acetate-heptane); HPLC retention time 13.1 minutes, stationary phase: Gemini 5μ C18 250x4.6 mm, ultraviolet detector at 210 mm, mobile phase: 1 mL/min, 60:40:0.1 v/v methanol-water-acetic acid).

Scheme 7d, Step C: Preparation of (S)-(+) 2-methyl-5-phenylpentanoic acid [18g(i)]
retention time 26.0 minutes; Chiralpak IA, 5μ, 4.6×25 mm, ultraviolet detector at 206 nm 0.75 ml/min 99:1:0.5 v/v heptanes-2-propanoic-acetic acid; MS (ESI) m/z 191.1 (M−1); 1H-NMR (CDCl3) δ 7.33-7.27 (m, 2H), 7.22-7.16 (m, 3H), 2.67-2.60 (m, 2H), 2.56-2.46 (m, 1H), 1.90-1.60 (m, 3H), 1.59-1.36 (m, 1H), 1.25-1.14 (m, 3H); [β]219.9D +0.080 (0.0150 g/1.5 ml) (0.5) = +17.79° (c=1, CHCl3).

Scheme 7d, Step E1: Preparation of (S)-(−)-ethyl 2-methyl-5-phenylpentanoate [12g(i)]

\]

To a solution consisting of (S)-(−)-2-methyl-5-phenylpentanoic acid (18g(i), 2.3 g, 12 mmol) in ethanol (200 mL) was added 4 drops of sulfuric acid and the mixture heated at reflux overnight. The mixture was cooled and subsequently concentrated under vacuum. The residue was diluted with ethyl acetate and washed twice with brine. The organic layer was dried over sodium sulfate, filtered, and concentrated under vacuum to afford the title intermediate (2.4 g; 91%) as a clear oil. TLC Rf 0.66 (solvent system: 15:85:1 v,v,v ethyl acetate-heptane-acetic acid; MS (ESI) m/z 221.1 (M+1); 1H-NMR (CDCl3) 7.29-7.25 (m, 2H), 7.21-7.13 (m, 3H), 4.12 (q, J=6.9 Hz, 2H), 2.64-2.57 (m, 2H), 2.48-2.39 (m, 1H), 1.75-1.54 (m, 3H), 1.52-1.41 (m, 1H), 1.24 (t, J=7.14 Hz, 3H) 1.16-1.11 (m, 3H); [β]219.9D +40.101 (0.01506 g/1.5 ml) (0.5) = +20.12° (c=1, CHCl3).

\]

To a solution consisting of dimethyl phosphate (23.37 g, 188.4 mmol) in THF (400 mL) at −78°C, was slowly added n-butyllithium (112 mL, 179 mmol, 1.6 M solution in hexane). The mixture was stirred for 30 minutes, at which time (S)-(−)-ethyl 2-methyl-5-phenylpentanoate (12g(i), 28.1 g, 94.2 mmol) in THF (100 mL) was added slowly, and the mixture stirred at −78°C for 2 hours, after which time it was allowed to come to room temperature overnight. The reaction mixture was treated with 5% KHSO4 and extracted with ethyl acetate three times. The organic layer was washed twice with 50:50 water-brine and the organic layer was dried over sodium sulfate, filtered, and concentrated under vacuum. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane-ethyl acetate-heptane (60:40 v/v) to afford the enantiopure title β-keto phosphonate intermediate (11.9 g) as a clear oil, pure of unrelated components; TLC Rf 0.22 (solvent system: 60:40 v/v ethyl acetate-heptane); HPLC retention time 14.5 minutes, 5μ Chiralpak IA 250×4.6 mm, ultraviolet detector at 210 nm. 1 ml/min, 90:10:0.01 v/v heptane-isopropanol-acetic acid chiral purity 97.8% (S), 2.19% (R); MS (ESI) m/z 297.1 (M−1); 1H-NMR (CDCl3) δ 7.28-7.21 (m, 2H), 7.17-7.12 (m, 3H), 3.67-3.71 (m, 6H), 3.45-3.50 (d, J=2.20 Hz, 1H), 3.04 (d, J=2.20 Hz, 1H), 2.79-2.70 (m, 1H), 2.54-2.62 (m, 2H), 1.74-1.54 (m, 3H), 1.42-1.24 (m, 1H), 1.07 (d, J=6.96 Hz, 3H); [β]219.9D +40.084 (0.0169 g/1.5 ml) (0.5) = +14.91° (c=1.13, CHCl3). The chromatography also provided another portion (8.3 g) of the title β-keto phosphate intermediate; about 95% chemical purity based on visual observation of TLC; HPLC retention time 16.399 minutes, 5 μ Chiralcel OJ-H 250×4.6 mm, ultraviolet detector at 210 nm, 1 ml/min, 90:10:0.01 v/v heptanes-ethyl acetate-acetic acid, chiral purity 98.19% (S), 1.81% (R).

(R)-(+)-2-Methyl-5-phenylpentanoic acid [18h(ii)] was prepared in the same manner as (S)-2-methyl-5-phenylpentanoic acid [18g(ii)]. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane-acetic acid (20:80:0.4 v/v/v) to afford the title intermediate (20.8 g) as a clear oil; TLC R<sub>g</sub> 0.51 (solvent system: 30:70:1 v/v/v ethyl acetate-heptane-acetic acid; HPLC retention time 24.46 min; Chiralpak IA 4.6 x 25 mm 5μ, at a wavelength of 208 nm 0.75 mL/min, 99:1 0.5 heptane: 2-propanol: acetic acid, chiral purity 99.32% (R), 0.68% (S); MS (ESI<sup>+</sup>) m/z 191.1 (M−1); <sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ 7.31-7.26 (m, 2H), 7.21-7.15 (m, 3H), 2.67-2.57 (m, 2H), 2.56-2.44 (m, 3H), 1.79-1.59 (m, 3H) 1.58-1.41 (m, 1H), 1.18 (d, J=6.96 Hz, 3H).

Scheme 7d, Step E2: Preparation of (R)-ethyl 2-methyl-5-phenylpentanoate [12h(iii)]

(R)-Ethyl 2-methyl-5-phenylpentanoate [12h(iii)] was prepared in the same manner as (S)-ethyl 2-methyl-5-phenylpentanoate [12g(iii)]. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (5:95 v/v) to afford the title intermediate (21.0 g, 88%) as a clear oil; TLC R<sub>g</sub> 0.66 (solvent system: 15:85:1 v/v/v ethyl acetate-heptane-acetic acid; MS (ESI<sup>+</sup>) m/z 221.2 (M+1); <sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ 7.52-7.26 (m, 2H), 7.20-7.14 (m, 3H), 4.11 (q, J=7.32 Hz, 2H), 2.64-2.57 (m, 2H), 2.48-2.39 (m, 1H), 1.75-1.53 (m, 3H), 1.52-1.41 (m, 1H), 1.27-1.21 (m, 3H), 1.13 (d, J=6.96 Hz, 3H); [α]<sub>23</sub><sup>α</sup> = 191° (c=1.18, CHCl<sub>3</sub> ).

Scheme 8c: Preparation of (R)-dimethyl (3-methyl-2-oxo-6-phenylhexyl)phosphonate [13h(iii)]

(R)-Dimethyl (3-methyl-2-oxo-6-phenylhexyl)phosphonate [13h(iii)] was prepared in the same manner as (S)-dimethyl (3-methyl-2-oxo-6-phenylhexyl)phosphonate [13g(iii)]. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (70:30 v/v) to afford the title phosphonate intermediate (83 mg, 66%) as a colorless oil; TLC R<sub>g</sub> 0.22 (solvent system: 70:30 v/v ethyl acetate-heptane); HPLC retention time 12.36 min, 5μ Chiralpak OJ-H 4.6 x 250 mm, at ultraviolet wavelength of 210 nm, 90:10:0.1 heptane:ethanol:acetic acid 1 mL/min, chiral purity 100% (R); MS (ESI<sup>+</sup>) m/z 297.1 (M+1); <sup>1</sup>H NMR (CDCl<sub>3</sub>) δ 7.29 (d, J=7.61 Hz, 2H), 7.22-7.16 (m, 3H), 3.77 (d, J=11.35 Hz, 3H), 3.78 (d, J=11.35 Hz, 3H), 3.13 (d, J=11.83 Hz, 1H), 3.08 (d, J=11.83 Hz, 1H), 2.78 (d, J=6.96 Hz, 1H), 2.57-2.56 (m, 2H), 1.61-1.52 (m, 3H), 1.45-1.32 (m, 1H), 1.11 (d, J=6.96 Hz, 3H); [α]<sub>23</sub><sup>α</sup> = 191° (c=1.18, CHCl<sub>3</sub> ).

Scheme 7e, Steps A and B: Preparation of (S)-4-benzyl-3-(5-phenylpentanoyl)oxazolidin-2-one

To a solution consisting of (S)-4-benzyl oxazolidin-2-one (0.9 g, 5.08 mmol) in THF (20 mL) at −78°C was slowly added n-butyllithium (3.5 mL, 5.6 mmol, 1.6 M solution in hexane). The mixture was stirred at −78°C for 2 hours, after which time 5-phenylpentanoyl chloride (1 g, 5 mmol, prepared by treatment of 5-phenylpentanoic acid with oxalyl chloride and catalytic DMAP) was added slowly. The reaction mixture was stirred at −78°C for 2 hours and then allowed to rise to room temperature overnight. The mixture was acidified with 5% KHCO<sub>3</sub> and extracted twice with ethyl acetate. The organic phase was washed with brine, dried over sodium sulfate, filtered, and concentrated under vacuum. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (25:75 v/v) to afford the title intermediate (1.4 g, 82%) as a clear oil; TLC R<sub>g</sub> 0.40 (solvent system: 25:75 v/v ethyl acetate-heptane); MS (ESI<sup>+</sup>) m/z 337.4 (M+H)*, 360.2 (M+Na)*.

Scheme 7e, Step C: Preparation of (S)-4-benzyl-3-((S)-2-methyl-5-phenylpentanoyl)oxazolidin-2-one

To a solution consisting of (S)-4-benzyl-3-(5-phenylpentanoyl)oxazolidin-2-one (1.24 g, 3.68 mmol) in THF (20 mL) at −78°C was slowly added lithium bis-(trimethylsilyl) amide (4.41 mL, 4.41 mmol, 1 M solution in THF). The mixture was stirred at −78°C for 1 hour, after which time isodomethane (0.27 mL, 4.2 mmol) was added slowly, and
the mixture was allowed to rise to room temperature and stir overnight. The mixture was acidified with 5% KHSO₄ and extracted twice with ethyl acetate. The organic layer was washed twice with brine, dried over sodium sulfate, filtered and concentrated under vacuum. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (25:75 v/v) to afford 563 mg (43.6%) of the title intermediate (563 mg, 43.6%) as a clear oil; TLC Rₐ 0.53 (solvent system: 25:75 v/v ethyl acetate-heptane; MS (ESI⁺) m/z 352.3 (M+H)⁺ 374.2 (M+Na)⁺).

Scheme 7e, Step D: Preparation of (S)-2-methyl-5-phenylpentanoic acid [18g(i)]

To a mixture consisting of (S)-4-benzyl-3-((S)-2-methyl-5-phenylpentanoyl)oxazolidin-2-one and water cooled to 0°C was added hydrogen peroxide and lithium hydroxide. The reaction mixture was stirred for 4 hours and was subsequently acidified with 5% KHSO₄ and extracted twice with ethyl acetate, the organic layer was washed twice with brine, dried over sodium sulfate, and concentrated under vacuum. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane-acetic acid (25:75:0.4) to afford intermediate (293 mg, 95%) as a colorless oil; TLC Rₐ 0.35 (solvent system: 25:75:0.4 v/v/v ethyl acetate-heptane-acetic acid); HPLC retention time 12.08 min, stationary phase: Chirpak IA 4.6x250 mm 5μ, ultraviolet detector at 210 nm, mobile phase: 1 mL/min, 99:1.01 heptane:2-propanol: acetic acid, chiral purity 97.22% (S), 2.78% (R).

Scheme 7e, Step E: Preparation of (S)-2,5-dioxopyrrolidin-1-yl 2-methyl-5-phenylpentanoate [16g(i)]

(S)-(S)-Dimethyl (3-methyl-2-oxo-6-phenylhexyl)phosphonate [13d(i)] was prepared in three steps from (S)—N—((R)-2-hydroxy-1-phenylethyl)-2-methyl-5-phenylpentanamide 17g(i) as in the sequence of steps (Scheme 7d, Steps D and E, and Scheme 8c) described above for the same process.

Preparation of (S)-(S)-dimethyl (3-methyl-2-oxo-5-phenylpentyl)phosphonate [13d(i)]

(S)-Dimethyl (3-methyl-2-oxo-5-phenylpentyl)phosphonate [13d(i)] was prepared in the same manner as (S)-(S)-dimethyl (3-methyl-2-oxo-6-phenylhexyl)phosphonate [13g(i)] described above according to Schemes 7d and 8c, except...
that 1-bromo-2-phenylethane was used instead of 1-bromo-3-phenylpropane. The crude product was purified by silica gel chromatography eluting with ethyl acetate-heptane (50: 50 v/v) to afford the title intermediate (460 mg) as a colorless oil; TLC Rf 0.14 (solvent system: 50:50 v/v ethyl acetate: heptane); MS (ESI\*) m/z 327.1 (M+H\*); \textsuperscript{1}H-NMR (CDCl\textsubscript{3}) δ 7.27-7.24 (m, 2H), 7.19-7.14 (m, 3H), 3.79-3.76 (m, 6H), 3.13 (s, 1H), 3.08 (s, 1H), 2.76-2.68 (m, 1H), 2.61-2.56 (m, 2H), 1.68-1.56 (m, 4H), 1.35-1.28 (m, 4H), 1.09 (d, J=6.96 Hz, 3H); [α]\textsubscript{D}\textsuperscript{21} = -0.074/(0.01534 g/1.5 mL) (0.5)=+14.10° (c=1.02, CHCl\textsubscript{3}).

Exemplary embodiments may be prepared utilizing a Horner-Emmons-Wadsworth-type procedure, according to the route described below in Schemes 9 and 10 by the coupling of an aldehyde intermediate, such as those for which their preparations are described and illustrated above (6a-f), with a β-keto phosphonate (13), such as those for which their preparations are described and illustrated above (13d-i), to provide an α,β-unsaturated ketone compound intermediate (20a-f). In some applications, the Horner-Emmons-Wadsworth reaction comprises contacting the aldehyde with the β-keto phosphonate in the presence of lithium chloride, a trialkylamine base, such as triethylamine or diisopropylamylamine, and a suitable solvent such as THF. A reduction of the C15-oxygen group to the corresponding C15-hydroxy group may be carried out with a reducing agent to provide C15αβ-OH stereoisemic mixtures 21a-f (Scheme 9, Step B). In some applications, the reducing agent comprises sodium borohydride. In some applications, the reduction is a stereoselective reduction such as a Corey-Bakshi-Shibata (CBS) reduction. These mixtures may be separated into their C15-stereoisomer components 22a-f and 23a-f by HPLC (Step C) to provide the C15α-hydroxy (usually corresponding to the stereochemical nomenclature of C15R-hydroxy within the text of Examples) (22a-f) and C15β-hydroxy (usually corresponding to the nomenclature of C15R-hydroxy within the text of Examples) (23a-f) diastereomers. The ester intermediates 22a-f and 23a-f may subsequently be hydrolyzed to carboxylic acid embodiments 24a-f (Step D1) and 25a-f (Step D2), respectively. Organic β-keto phosphonates bearing a single chiral center, such as those shown below where, for example, B comprises

affords, when coupled with aldehydes like 6a-f in Scheme 9, Step A and then reduced as in Step B, a mixture (26a-f) comprising four diastereomers. The mixture may be separated into its isolated diastereomers 27a-f to 30a-f using preparatory HPLC as illustrated in Scheme 10, Step A. The corresponding carboxylic acids 31a-f to 34a-f may be obtained by basic aqueous hydrolysis of the esters using equimolar or excess (about 1:10 molar equivalents) hydroxide base, such as lithium hydroxide, potassium hydroxide, or sodium hydroxide, at about 1-3 M in hydroxide base. The basic aqueous hydrolysis reaction mixture may further comprise at least one solvent that is miscible with water, such as methanol, ethanol, THF, 1,4-dioxane, or DMF. Detailed procedures for preparing these compounds are described below.
TABLE OF EXAMPLES

Examples 1A-1D

Scheme 9. Step A: Preparation of (R,E)-methyl 7-(2-oxo-5-(3-oxo-7-phenylhept-1-en-1-yl)pyrroli- din-1-yl)heptanoate

To a stirring mixture consisting of (R)-methyl 7-(2-formyl-5-oxopyrroloidin-1-yl)heptanoate (6a, 0.200 g, 0.78 mmol) and dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f, 0.16 g, 0.56 mmol) in THF (20 mL) at 0°C. was added lithium chloride (83 mg, 1.96 mmol) and triethylamine (0.13 mL, 0.94 mmol). The reaction mixture was stirred at room temperature overnight. To the reaction mixture was added a saturated solution of ammonium chloride (30 mL) and organic material was extracted with ethyl acetate (100 mL). The organic layer was separated, washed with brine (50 mL), dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by silica gel chromatography eluting with ethyl acetate-heptane (7:3 v/v) to afford the title compound (182 mg, 56%); TLC R₄ 0.55 (solvent system: 75:25 v/v ethyl acetate-heptane).

Scheme 9, Steps B and C: Preparation of methyl 7-((R)-2-((S,E)-3-hydroxy-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)heptanoate (Example 1A) and methyl 7-((R)-2-((R,E)-3-hydroxy-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)heptanoate (Example 1B)
To a mixture consisting of (R,E)-methyl 7-(2-oxo-5-(3-oxo-7-phenoxyheptyl-1-en-1-yl)pyrrolidin-1-yl)heptanoate (182 mg, 0.47 mmol) in methanol (15 mL) at −40°C, was added cerium (III) chloride heptahydrate (176 mg, 0.47 mmol). The reaction mixture was cooled to −78°C. and stirred for one hour. To the reaction mixture was added sodium borohydride (36 mg, 0.94 mmol), and the reaction mixture stirred for two hours. Acetone was added and the mixture was stirred for 15 minutes at −78°C, after which the mixture was allowed to warm to room temperature. To the room temperature reaction mixture was added a saturated aqueous solution of ammonium chloride (30 mL) and the organic material was extracted with ethyl acetate (100 mL). The organic layer was separated and washed with brine (50 mL), dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by silica gel chromatography eluting with ethyl acetate–heptanes (7:3 v/v) to afford the title compound (163 mg, 89%) as an epimeric mixture with regard to the configuration of the C15-OH position.

From the epimeric mixture (163 mg), the single epimers of Example 1A and Example 1B were isolated following separation by prep HPLC.

Gilson Semi-Prep instrument; ultraviolet detector at 210 nm; Luna 5 μ Silica 250×21.2 mm column; mobile phase of heptanes–ethanol (92:8 v/v).

Example 1A (40 mg): a clear oil; HPLC retention time 23 min; TLC Rf 0.36 (solvent system: 3:1 v/v ethyl acetate-heptane); MS (FIA/ESI)+ m/z 415.6 (M+1).

Example 1B (78 mg); a clear oil; HPLC retention time 18 min; TLC Rf 0.42 (solvent system: 3:1 v/v ethyl acetate-heptane); MS (FIA/ESI+) m/z 415.6 (M+1).

Scheme 9, Step D1: Preparation of 7-((R)-2-((S,E)-3-hydroxy-7-phenoxyheptyl-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid (Example 1C)

To a mixture consisting of methyl 7-((R)-2-((S,E)-3-hydroxy-7-phenoxyheptyl-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate (40 mg, 0.096 mmol, prepared as Example 1A above) in methanol (2 mL) was added 2 h sodium hydroxide (1 mL). The reaction mixture was stirred at room temperature for three hours. To the reaction mixture was added a solution of 5% potassium hydrogen sulfate–brine (1:1) to achieve an acidic pH, and the organic material was extracted with ethyl acetate. The organic phase was dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by silica gel eluting with ethyl acetate-acetic acid (100:0.4 v/v) to afford the title compound (33 mg, 85%) as a colorless oil; TLC Rf 0.14 (solvent system: 100:1 v/v ethyl acetate-acetic acid); MS (ESI)+ m/z 400 (M+1); 1H NMR (methanol-d4) δ 7.21-7.27 (m, 2H), 7.12-7.18 (m, 3H), 5.71 (dd, 1H) 5.48 (dd, 1H) 4.04-4.18 (m, 2H), 3.34-3.47 (m, 2H), 2.82-2.9 (m, 1H), 2.62 (t, 2H), 2.22-2.4 (m, 5H), 1.49-1.68 (m, 7H), 1.25-1.48 (m, 8H).
The set of four diastereomers of methyl 7-((2R)-2-((E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate was prepared from methyl 7-((2R)-2-((E)-4-methyl-3-oxo-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate in the same manner as described in Example 1A-1D above utilizing cerium (ITI) chloride heptahydrate and sodium borohydride.

From the diastereomeric mixture of four isomers, the epimeric mixtures of Example 2A and Example 2B were isolated following separation by prep HPLC.

Gilson Prep instrument; ultraviolet detector at 210 nm; Luna Silica 5 μ 250 mmx21.2 mm column; mobile phase of heptane-ethanol (92:8 v/v); 21.2 mL/min.

Example 2A; a clear oil; HPLC retention time 18 min; TLC Rf 0.38 (solvent system: 4:1 v/v ethyl acetate-heptane); MS (ESI−) m/z 430.2 (M+1).

Example 2B; a clear oil; HPLC retention time 14.5 min; TLC Rf 0.46 (solvent system: 4:1 v/v ethyl acetate-heptane); MS (ESI−) m/z 430.2 (M+1).

Scheme 9, Step D1: Preparation of 7-((2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid (Example 2C)

7-((2R)-2-((3S,E)-3-Hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid was prepared from the corresponding carboxylic ester, Example 2A, in the same manner as its epimer 7-((2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid (Example 2C), to obtain 134 mg (100%) of a clear oil; TLC Rf 0.32 (solvent system: 85:15:1 v/v ethyl acetate-heptane-acetic acid); 1H NMR (CD3OD) δ 7.26-7.10 (m, 5H), 5.71 (td, 1H, J=5.86, 15.38 Hz), 5.52-5.44 (m, 1H), 4.18-4.12 (m, 1H), 3.98-3.95 (m, 1H), 3.46 (td, 1H, J=7.69, 13.55 Hz), 2.91 (dd, J=5.49, 8.51, 13.46 Hz), 2.66-2.53 (m, 2H), 2.43-2.15 (m, 6H), 1.73-1.44 (m, 9H), 1.39-1.23 (m, 4H), 1.18-1.07 (m, 1H), 0.89 (dd, 3H, J=6.77, 10.07 Hz); MS (ESI−) m/z 414.2 (M−1).

Preparation of 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid (Example 2E)

The title compound is prepared from (R)-methyl 7-(2-formyl-5-oxopyrrolidin-1-yl)heptanoate (6a) with the same sequence of chemical steps used to prepare Example 1A from (6a), except that dimethyl (S)-(−)-(3-methyl-2-oxo-6-phenylhexyl)phosphonate [15g(i)] is used instead of dimethyl (2-oxo-6-phenylhexyl)phosphonate (13f) in the Horner-Wadsworth-Emmons step.

Preparation of 7-((R)-2-((3S,4R,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid (Example 2F)
The title compound is prepared from (R)-methyl 7-(2-formyl-5-oxopyrroloidin-1-yl)heptanoate (6a) in the manner used to prepare Example 2E from (6a), except that dimethyl (R)-(-)-(3-methyl-2-oxo-6-phenylethyl)phosphonate [13h (i)] is used instead of dimethyl (S)-(+)-(3-methyl-2-oxo-6-phenylethyl)phosphonate [13g(i)] in the Horner-Wadsworth-Emmons step.

Example 3A-3D

Scheme 9, Steps A, B, and C: Preparation of methyl 5-(3-(2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate (3A) and methyl 5-(3-(2R)-2-((3R,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate (3B)

The set of four diastereomers of methyl 5-(3-(2R)-2-((3E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate was prepared in the same manner as described in Example 2A-2D and illustrated in Scheme 9, Step A and B, except that (R)-methyl 5-(3-(2-formyl-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate (6d) was used instead of (R)-methyl 7-(2-formyl-5-oxopyrroloidin-1-yl)heptanoate (6a) in Step A.

From the diastereomeric mixture of four isomers (85 mg), the epimeric mixtures of Example 3A and Example 3B were isolated following separation by prep HPLC. An Agilent Semi-Prep instrument; ultraviolet detector at 205 nm; Luna Siliica 5u 250 mm x 10 mm column; mobile phase of heptane-ethanol (90:10 v/v).

Example 3A (17.1 mg); a clear oil; prep HPLC retention time 17.1-19.5 minutes; 1H-NMR (CDCl₃) δ 7.6 (d, 1H), 7.3-7.25 (m, 2H), 7.2-7.15 (m, 3H), 7.1 (d, 1H), 5.85-5.75 (m, 1H), 5.55-5.5 (m, 1H), 4.7-4.65 (m, 1H), 4.25-4.2 (m, 1H), 4.1-4.0 (m, 1H), 3.87 (s, 3H) 3.85-3.75 (m, 1H), 2.6 (t, 2H), 2.45-2.25 (m, 3H), 1.75-1.5 (m, 4H), 1.2-1.1 (m, 2H), 0.91 (d, 3H); MS (ESI⁺) m/z 466.1 (M+1), 488.0 (M+Na).

Example 3B (52 mg); a clear oil; prep HPLC retention time 13.8-16.9 minutes; 1H-NMR (CDCl₃) δ 7.6 (d, 1H), 7.3-7.25 (m, 2H), 7.2-7.15 (m, 3H), 7.1 (d, 1H), 5.85-5.75 (m, 1H), 5.55-5.5 (m, 1H), 4.7-4.65 (m, 1H), 4.25-4.2 (m, 1H), 4.1-4.0 (m, 1H), 3.87 (s, 3H) 3.85-3.75 (m, 1H), 2.6 (t, 2H), 2.45-2.25 (m, 3H), 1.75-1.5 (m, 4H), 1.2-1.1 (m, 2H), 0.91 (d, 3H); MS (ESI⁺) m/z 466.1 (M+1), 488.0 (M+Na).

Scheme 9, Step D1: Preparation of 5-(3-(2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylic acid

Example 3C

5-(3-(2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylic acid was prepared from the corresponding carboxylic ester, Example 3A, in the same manner as 7-((2R)-2-((3S,E)-3-hydroxy-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)heptanoic acid, Example 1C, to obtain 13.8 mg; TLC Rₐ 0.40 (solvent system: 96:4 v/v dichloromethane-methanol-acetic acid); 1H-NMR (CDCl₃) δ 7.6 (d, 1H), 7.25-7.15 (m, 2H), 7.1-7.05 (m, 3H), 7.05 (d, 1H), 5.8-5.7 (m, 1H), 5.5-5.4 (m, 1H), 4.65-4.55 (m, 1H), 4.25-4.15 (m, 1H), 4.05-3.95 (m, 1H), 3.8-3.7 (m, 1H), 2.5 (t, 2H), 2.45-2.3 (m, 2H), 2.3-2.15 (m, 1H), 1.75-1.4 (m, 4H), 1.2-1.1 (m, 2H), 0.85 (d, 1.5H) 0.83 (d, 1.5H); MS (ESI⁺) m/z 452.1 (M+1) (ESI⁻) m/z 450.1 (M−1).

Scheme 9, Step D2: Preparation of 5-(3-(2R)-2-((3R,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylic acid (Example 3D)

5-(3-(2R)-2-((3R,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroloidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylic acid was prepared from the corresponding carboxylic ester, Example 3B, in the same manner as its epimer 5-(3-(2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenyl-
Example 4B (32.6 mg); a clear oil; prep HPLC retention time 15.6-18.0 minutes; 1H-NMR (CDCl3) δ 7.6 (d, 1H), 7.3-7.2 (m, 2H), 7.2-7.1 (m, 3H), 6.8 (d, 1H), 5.65 (dd, 1H), 5.5-5.45 (m, 1H), 4.05-4.0 (m, 2H), 3.85 (s, 3H), 3.6-3.55 (1H, m), 3.0-2.95 (m, 1H), 2.8 (t, 2H), 2.6-2.5 (m, 2H), 2.5-2.3 (m, 2H), 2.3-2.1 (m, 1H), 1.9-1.8 (m, 2H), 1.7-1.4 (m, 5H), 1.2-1.1 (m, 1H), 0.86 (d, 1.5H), 0.85 (d, 1.5H); MS (ESI) m/z 492.1 (M+Na)

Scheme 9. Step D1: 5-(3-((2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid (Example 4C)

5-(3-((2R)-2-((3S,E)-3-Hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid was prepared from the corresponding carboxylic ester, Example 4A, in the same manner as 7-((R)-2-((S,E)-3-hydroxy-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid, Example 1C, to obtain 7.8 mg as a colorless oil; TLC Rf 0.40 (solvent system: 96:4 v/v dichloromethane-methanol-acetic acid); 1H-NMR (CDCl3) δ 7.6 (d, 1H), 7.3-7.2 (m, 2H), 7.2-7.1 (m, 3H), 6.75 (d, 1H), 5.6 (dd, 1H), 5.45-5.35 (m, 1H), 4.1-3.9 (m, 2H), 3.55-3.45 (1H, m), 2.95-2.9 (m, 1H), 2.75 (t, 2H), 2.6-2.45 (m, 2H), 2.45-2.3 (m, 2H), 2.3-2.1 (m, 1H), 1.85-1.75 (m, 2H), 1.65-1.35 (m, 5H), 1.2-1.0 (m, 1H), 0.80 (d, 1.5H), 0.79 (d, 1.5H); MS (ESI) m/z 454.1 (M+1)

Scheme 9. Step D2: 5-(3-((2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid (Example 4D)

5-(3-((2R)-2-((3S,E)-3-Hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid was prepared from the corresponding carboxylic ester, Example 4B, in the same manner as its epimer 5-(3-((2R)-2-((3S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid (Example 4C), to obtain 26.8 mg as a colorless oil; TLC Rf 0.40 (solvent system: 20:8 v/v dichloromethane-methanol-acetic acid); 1H-NMR (CDCl3) δ 7.6 (d, 1H),
7.3-7.2 (m, 2H), 7.2-7.1 (m, 3H), 6.75 (d, 1H), 5.6 (dd, 1H), 5.45-5.35 (m, 1H), 4.1-3.9 (m, 2H), 3.55-3.45 (1H, m), 2.95-2.9 (m, 1H), 2.75 (t, 2H), 2.6-2.45 (m, 2H), 2.45-2.3 (m, 2H), 2.3-2.1 (m, 1H), 1.85-1.75 (m, 2H), 1.65-1.35 (m, 5H), 1.2-1.0 (m, 1H), 0.80 (d, 1.5H), 0.79 (d, 1.5H); MS (ESI³) m/z 454.1 (M+1).

5-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propylthiophene-2-carboxylic acid (Example 4E)

The title compound is prepared from (R)-methyl 5-((3-((2-formyl-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate (61) with the same sequence of chemical steps used to prepare Example 1E from (6a).

5-((R)-2-((3S,4R,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propylthiophene-2-carboxylic acid (Example 4F)

The title compound is prepared from (R)-methyl 5-((3-((2-formyl-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate (6) with the same sequence of chemical steps used to prepare Example 1F from (6a).

Examples 5A-5B

Preparation of 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid (Example 5A) and 5-((3-((R)-2-((3R,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid (Example 5B)

Example 5A

Example 5B

The title compounds are prepared according to the methods used to prepare Examples 1C and 1D, except aldehyde (60) is used instead of (6a) and β-keto phosphonate [13e(i)] is used instead of (13f).

The title compounds are prepared according to the methods used to prepare Examples 1C and 1D, except aldehyde (60) is used instead of (6a) and β-keto phosphonate [13e(i)] is used instead of (13f).

Example 5C

Example 5D

Example 5B

Example 5A
Preparation of 5-((3S,4S)-2-((3R,4S)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrrolidin-1-yl) propylthiophene-2-carboxylic acid (Example 6A) and 5-((3S,4S)-2-((3R,4S)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl) thiophene-2-carboxylic acid (Example 6B)

The title compounds are prepared according to the methods used to prepare Examples 1C and 1D, except aldehyde (6I) is used instead of (6a) and β-keto phosphonate [13i(i)] is used instead of (13i).

Preparation of 5-((3S,4S)-2-((3R,4S)-3-hydroxy-4-methyl-9-phenylnon-1-en-1-yl)-5-oxopyrrolidin-1-yl)propylthiophene-2-carboxylic acid (Example 7A) and 5-((3S,4S)-2-((3R,4S)-3-hydroxy-4-methyl-9-phenylnon-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl) thiophene-2-carboxylic acid (Example 7B)

The title compounds are prepared according to the methods used to prepare Examples 1C and 1D, except aldehyde (6I) is used instead of (6a) and β-keto phosphonate [13k(i)] is used instead of (13i).
Preparation of 5-((3-((R)-2-((3S,4R,E)-3-hydroxy-4-methyl-9-phenyl-1-en-1-yl)-5-oxypropyridin-1-yl)propyl)thiophene-2-carboxylic acid (Example 7C) and 5-((3-((R)-2-((3R,4R,E)-3-hydroxy-4-methyl-9-phenyl-1-en-1-yl)-5-oxypropyridin-1-yl)propyl)thiophene-2-carboxylic acid (Example 7D).

Example 7C

![Example 7C](image)

Example 7D

![Example 7D](image)

The title compounds are prepared according to the methods used to prepare Examples 1C and 1D, except aldehyde (6f) is used instead of (6a) and 3-keto phosphonate (13i(l)) is used instead of (13i).

Example 8

Radioligand Binding Assay for the Evaluation of the Affinity of Compounds for the Agonist Site of the Human Prostanoid EP2 Receptor in Transfected HEK-293 Cells

Assay Volume and Format:

200 µl in 96-well plate

Cell membrane homogenates (20 µg protein) are incubated for 120 min at 22°C with 0.5 nM [3H]PGE2 in the absence or presence of the test compound in a buffer containing 10 mM MES/KOH (pH 6.0), 10 mM MgCl2 and 1 mM EDTA.

Nonspecific binding is determined in the presence of 10 µM PGB2.

Following incubation, the samples are filtered rapidly under vacuum through glass fiber filters (GF/B, Packard) presoaked with 0.3% PEG and rinsed several times with ice-cold 50 mM Tris-HCl using a 96-sample cell harvester (Unifilter, Packard). The filters are dried then counted for radioactivity in a scintillation counter (Topcount, Packard) using a scintillation cocktail (Microscint 0, Packard).

The standard reference compound is PGE2, which is tested in each experiment at several concentrations to obtain a competition curve from which its IC50 is calculated.

Example 9

Functional Cellular Assays (STEP Plate Format)

Both SEAP activity assay and cAMP level assay for EP2 or EP4 agonist were performed on EP2/EP4 STEP (Surface Transfection and Expression Protocol) plates (from Origins®) which are coated with both rat EP2 or EP4 receptor and secreted alkaline phosphatase (SEAP) reporter constructs. Cells grown on the STEP complex will express EP2 or EP4 at the cell surface. Binding of agonists to EP2 or EP4 initiates a signal transduction cascade results in a transient increase in cAMP and an increase in expression of SEAP which is secreted into the cell culture media. cAMP levels were then measured with an ELISA assay and SEAP activity was measured with a luminescence-based alkaline phosphatase substrate.

Procedure of SEAP Activity Assay for EP2/EP4 Agonist

1. Seed cells on an EP2 or EP4 STEP plate at a density of 40,000-80,000 cells/well in 200 µl of reduced serum medium containing 0.5% FBS. Place the plate in a 37°C incubator with 5% CO2 and incubate overnight.

2. After 16-18 hours of incubation, aspirate the culture media from each well.

3. Add 200 µl of culture medium containing different concentration of test compounds to the assigned wells. For each test compound, at least 8 concentrations starting at highest 10 µM and lowest 0.01 mM were tested. In addition each concentration had triplicates. A PGE2 curve (concentrations from lowest to highest, 0 pM, 0.384 pM, 1.92 pM, 9.6 pM, 48 pM, 240 pM, 1200 pM, and 6000 pM) was always run in parallel with test compounds.

4. After 6-8 hours of stimulation with test compounds and PGE2, 10 µl of culture media from each well was transferred to a corresponding well of a 96-well solid black plate. Cover the plate with the lid.

5. Inactivate the endogenous alkaline phosphatase by heating the samples at 65°C for 30 minutes.

6. Add 50 µl of luminescence-based alkaline phosphatase substrate (Michigan Diagnostics, LLC, Cat#SAP450101) to each well.

7. Measure the SEAP activity by reading the luminescent signal from each well.

8. The data was analyzed and the EC50 for PGE2 and each test compound was calculated using GraphPad Prism 5.

Procedure of cAMP Assay for EP2/EP4 Agonist

1. Seed cells on an EP2 or EP4 STEP plate at a density of 40,000-80,000 cells/well in 200 µl of reduced serum medium containing 0.5% FBS. Place the plate in a 37°C incubator with 5% CO2 and incubate overnight.

2. After 16-18 hours of incubation, aspirate the culture media from each well.

3. Add 200 µl of culture medium containing 500 µM IBMX (an inhibitor of cAMP phosphodiesterase) and different concentration of test compounds to the assigned wells. For each test compound, at least 8 concentrations starting at highest 10 µM and lowest 0.01 pm were tested. In addition each concentration had triplicates. A PGE2 curve (concentrations from lowest to highest, 0 pM, 0.384 pM, 1.92 pM, 9.6 pM, 48 pM, 240 pM, 1200 pM, and 6000 pM) was always run in parallel with test compounds.

4. Incubate the cells in a cell culture incubator for 30 minutes.

5. Centrifuge the plate at 1,000x rpm for 10 minutes.

6. Aspirate the supernatant.

7. Add 100 µl of ETA assay buffer to each well and put the plate with the lid in a ~80°C freezer. Freeze the sample in the ~80°C for at least one hour.
8. Take the plate out from the -80°C freezer and leave it at room temperature to thaw completely.

9. Centrifuge the plate at 1,000× rpm for 10 minutes.

10. Pick up 50 µl of supernatant from each well for cAMP level measurement, using an ELISA assay kit from Cayman chemical, Item #581001.

11. The data was analyzed and the EC₅₀ for PGE₂ and each test compound was calculated using GraphPad Prism 5.

Specificity of EP₁ EP₄ Agonist on the Receptors

Compounds demonstrating potency in SEAP or cAMP functional assays were confirmed for receptor agonist specificity by incubation of the cells with the compound together with an EP₁ specific antagonist AH-6809 or an EP₄ specific antagonist I-161,982. Compounds that showed agonist activity for either EP₁ or EP₄ are specific if the stimulation effect was diminished when incubated together with their receptor specific antagonist.

α = / or /
β = / or /
We claim:

1. A compound of formula (Ia)

\[ G \text{ is } \]

\[ \text{(la)} \]

or a pharmaceutically acceptable salt thereof, wherein:

L is

a) \( \text{C}_1-\text{C}_7 \)-alkylene, \( \text{C}_3-\text{C}_7 \)-alkenylene, or \( \text{C}_3-\text{C}_7 \)-alkynylene,

wherein the \( \text{C}_1-\text{C}_7 \)-alkylene, \( \text{C}_3-\text{C}_7 \)-alkenylene, or \( \text{C}_3-\text{C}_7 \)-alkynylene is optionally substituted with 1, 2, 3, 6, or 4 fluoro substituents;

b) \( (-\text{CH}_2)_t-G-(\text{CH}_2)_p- \); wherein \( t \) is 0, 1, or 2, \( p \) is 0, 1, 2, or 3, and \( t+p \) is 0, 1, 2, 3, or 4; or

c) \( (-\text{CH}_2)_n-G^1-(\text{CH}_2)_p- \), \( (-\text{CH}_2)_n-G^2-(\text{CH}_2)_p- \), \( (-\text{CH}_2)_n-G^3-(\text{CH}_2)_p- \), or \( (-\text{CH}_2)_n-C^1-G^2- \);

wherein \( n \) is 0, 1, 2, 3, 4, 5, or 6; and

or 1, 2, 3, 4, 5, or 6;
G2 is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁-C₄ alky1, C₁-C₄ haloalkyl, cyano, halogen, C₅-C₇ alkoxy, and C₅-C₇ haloalkoxy;

R¹ is COOR², CONR²R'₃, CH₃OR³, SO₃R², SO₂NR²R'₃, PO(OR')₂, or tetrazol-5-yl;
R² is H, C₁-C₄ alkyl, or aryl;
R³ is H, C₁-C₄ alkyl, COR¹₁, OR², or SO₂R¹₁;
R² is C₁-C₄ alkyl;
R' is, at each occurrence, is independently H or C₁-C₄ alkyl;
L₁ is —C(R²)₂—C(R²)₂—, —C(R²)₂—C(R²)—, or —C—C—,

wherein R² and R³ are each H, CH₃, fluoro, or chloro;
and
R¹ is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 fluoro substituents;
R² is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁-C₄ alkyl, C₁-C₄ haloalkyl, cyano, halogen, C₅-C₇ alkoxy, C₅-C₇ haloalkoxy; and —C₁-C₄ alkylene-C₁-C₄ alkoxy;
and
r is 0 or 1.

2. The compound of claim 1, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) C₁-C₄ alkylene, wherein the alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents; or
b) —(CH₂)ₙ—G²—(CH₂)ₙ—, —(CH₂)ₙ—C—C—G²—, or —(CH₂)ₙ—C(H)—C(H)—G²—, wherein n is 1, 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6;
G² is

One of R¹ and R² is CH₃ and the other is H;
L¹ is
a) C₁-C₄ alkylene; or
c) —(CH₂)ₙ—G²—(CH₂)ₙ—, —(CH₂)ₙ—C—C—G²—, or —(CH₂)ₙ—C(H)—C(H)—G²—, wherein n is 1, 2 or 3; p is 0, 1, or 2, and n+p=1, 2, 3, or 4;
G² is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁-C₄ alkyl, C₁-C₄ haloalkyl, cyano, halogen, C₁-C₄ alkoxy, and C₁-C₄ haloalkoxy;
R¹ is COOR²; and
R² is H or C₁-C₄ alkyl.

3. The compound of claim 1, or a pharmaceutically acceptable salt thereof, wherein:
L² is C₂-C₄ alkylene, wherein the alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents;
L³ is —C(R²)—C(R²)—;
R² and R³ are each hydrogen;
and
R³ is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁-C₄ alkyl, C₁-C₄ haloalkyl, cyano, halogen, C₅-C₇ alkoxy, C₅-C₇ haloalkoxy; and —C₁-C₄ alkylene-C₁-C₄ alkoxy.

4. The compound of claim 2, or a pharmaceutically acceptable salt thereof, wherein:
L¹ is —C(R²)₂—C(R²)₂—, —C(R²)—C(R²)—, —C—C—,
or

wherein R² and R³ are each H, CH₃, fluoro, or chloro;
and
R¹ is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁-C₄ alkyl, C₁-C₄ haloalkyl, cyano, halogen, C₅-C₇ alkoxy, C₅-C₇ haloalkoxy; and —C₁-C₄ alkylene-C₁-C₄ alkoxy.

5. The compound of claim 4, or a pharmaceutically acceptable salt thereof, wherein:
L¹ is

wherein R² and R³ are each H, CH₃, fluoro, or chloro;
and
R¹ is aryl or heteroaryl, wherein the aryl and heteroaryl are optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁-C₄ alkyl, C₁-C₄ haloalkyl, cyano, halogen, C₅-C₇ alkoxy, C₅-C₇ haloalkoxy; and —C₁-C₄ alkylene-C₁-C₄ alkoxy.

6. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein:

One of R¹ and R² is CH₃ and the other is H;
L¹ is
a) C₁-C₄ alkylene; or
c) —(CH₂)ₙ—G²—(CH₂)ₙ—, —(CH₂)ₙ—C—C—G²—, or —(CH₂)ₙ—C(H)—C(H)—G²—, wherein n is 1, 2 or 3; p is 0, 1, or 2, and n+p=1, 2, 3, or 4;
G² is
111

L² is ethylene, n-propylene, n-butylene, or n-pentyne; and
R² is phenyl, wherein the phenyl is optionally substituted with 1, 2, 3, or 4 substituents selected from the group consisting of C₁₋₃ alkyl, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, C₁₋₃ haloalkoxy, and —C₁₋₃ alkylene-C₁₋₃ alkoxy.

7. The compound of claim 6, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) n-hexylen; or
c) —(CH₂)ₙ₋₁—G²—(CH₂)ₙ—, —CH₂—C═C—G²—, or —CH₂—C≡C(G²)—, wherein n is 1, 2 or 3; p is 0 or 1, and n+p=2 or 3;
G² is

R¹ is COOR²;
R² is H or CH₃;
L² is n-propylene or n-butylene; and
R² is phenyl.

8. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein L² is n-propylene.

9. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein L² is n-butylene.

10. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is C₁₋₃ alkylene, wherein the C₁₋₃ alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents.

11. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) —(CH₂)ₙ₋₁—G²—(CH₂)ₙ—, or —CH₂—C═C—G²—, or —CH₂—C≡C(G²)—, wherein n is 1, 2, 3, or 4, and n+p=1, 2, 3, 4, 5, or 6; and
G² is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁₋₃ alkyl, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, and C₁₋₃ haloalkoxy.

12. The compound of claim 8, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is C₁₋₃ alkylene, wherein the C₁₋₃ alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents.

13. The compound of claim 8, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) —(CH₂)ₙ₋₁—G²—(CH₂)ₙ—; or —CH₂—C═C—G²—, or —CH₂—C≡C(G²)—, wherein n is 1, 2, 3, or 4, and p is 0, 1, 2, or 3, and n+p=1, 2, 3, 4, 5, or 6; and
G² is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁₋₃ alkyl, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, and C₁₋₃ haloalkoxy.

14. The compound of claim 9, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is C₂₋₃ alkylene, wherein the alkylene is optionally substituted with 1, 2, 3, or 4 fluoro substituents.

15. The compound of claim 9, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is —(CH₂)ₙ₋₁—G²—(CH₂)ₙ—, wherein n is 2, 3, 4, or 5, p is 0, 1, 2, or 3, and n+p=2, 3, 4, 5, or 6; and
G² is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁₋₃ alkyl, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, and C₁₋₃ haloalkoxy.

16. The compound of claim 5, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) C₂₋₃ alkylene; or
c) —CH₂—C═C—G²—, or —CH₂—C≡C(G²)—, or —CH₂—C≡C(G²)—, wherein n is 1, 2, 3, 4, or 5, and n+p=1, 2, 3, 4, 5, or 6; and
G² is

wherein G² is optionally substituted with 1, 2, or 3 substituents selected from the group consisting of C₁₋₃ alkyl, C₁₋₃ haloalkyl, cyano, halogen, C₁₋₃ alkoxy, and C₁₋₃ haloalkoxy.

17. The compound of claim 6, or a pharmaceutically acceptable salt thereof, wherein:

L¹ is a) C₂₋₃ alkylene; or
c) —CH₂—C═C—G²—, or —CH₂—C≡C(G²)—, or —CH₂—C≡C(G²)—, wherein n is 1, 2, 3, 4, or 5, and n+p=1, 2, 3, 4, 5, or 6; and
113
18. A compound, or a pharmaceutically acceptable salt thereof, selected from the group consisting of:

methyl 7-((R)-2-((3R,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoate;
(Z)-methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)hept-5-enoate;
methyl 4-((2-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)ethoxy)phe nylthio)butanoate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 4-((2-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
(Z)-methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
(Z)-methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhex-1-en-1-yl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;

114
7-((S)-2-((3R,4S)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)heptanoic acid;
(Z)-7-((S)-2-((3R,4S)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)hept-5-enoic acid;
4-((2-((R)-2-((3R,4S)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylic acid;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)prop-1-yn-1-yl)thiophene-2-carboxylate;
methyl 5-((3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-6-phenylhexyl)-5-oxopyrrolidin-1-yl)propyl)thiophene-2-carboxylate;
methyl 3-([3-(R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]benzoic acid; 
methyl 7-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroolidin-1-yl)heptanoate; 
methyl 7-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrroolidin-1-yl)heptanoic acid; 
(Z)-methyl 7-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)heptanoic acid; 
methyl 4-((2-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)ethyl)thio)butanoic acid; 
methyl 5-3-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 4-((2-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)ethyl)benzoic acid; 
methyl 3-((S)-2-((3R,4S,E)-3-hydroxy-4-methyl-7-phenylheptyl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 4-((2-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)heptanoic acid; 
(Z)-7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)heptanoic acid; 
4-((2-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)ethyl)thio)butanoic acid; 
5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate; 
methyl 5-3-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-8-phenyloct-1-en-1-yl)-5-oxopyrroolidin-1-yl)propyl]thiophene-2-carboxylate;
19. A pharmaceutical composition comprising the compound of claim 1, or pharmaceutically acceptable salts thereof, and a pharmaceutically acceptable carrier.

20. A method of treating glaucoma, osteoporosis, bone fracture, or bone loss due to periodontal disease, comprising administering a therapeutically effective amount of the compound of claim 1 to a patient in need thereof.

21. A method of stimulating bone formation in a tooth socket having undergone implantation, a joint that is to undergo or that has undergone orthopedic implantation, or vertebrae that have undergone spinal fusion comprising administering a therapeutically effective amount of the compound of claim 1 to a patient in need thereof.

22. A method of treating glaucoma, alopecia, or neuropathic pain comprising administering a therapeutically effective amount of the compound of claim 1 to a patient in need thereof.

23. The compound of claim 18 selected from: 7-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)heptanoic acid, or a pharmaceutically acceptable salt thereof.

24. The compound of claim 18 selected from: 5-((R)-2-((3S,4S,E)-3-hydroxy-4-methyl-7-phenylhept-1-en-1-yl)-5-oxopyrrolidin-1-yl)propylthiophene-2-carboxylic acid, or a pharmaceutically acceptable salt thereof.
